2. Careful, Macron: Trump still has plenty of reasons to ditch the Iran nuclear deal

Some of Trump's most loyal supporters, including senator Tom Cotton of Arkansas, have long been opposed to the deal. (As the talks were happening in 2015, Cotton and many Republican allies went so far as to send a letter directly to the Iranian government saying any deal would be rescinded, a move some in the US considered treasonous.

3. Four Reasons Why the Iran Deal May Be the Worst Diplomatic Decision in History

Peter Navarro accuses Democrats and the Chinese Communist Party of being in cahoots in 2020 election

<https://www.foxnews.com/politics/wh-adviser-accuses-democrats-chinese-communist-party-cahoots-2020>

Joe Biden has said Trump is 'going after China in the wrong way'

White House trade adviser Peter Navarro accused the Democratic Party and the Chinese Communist Party (CCP) of being in cahoots in the 2020 presidential election to defeat President Trump.

Navarro leveled the accusation Wednesday in the driveway of the White House. When asked by a reporter for proof of the accusation, he replied: "It's obvious."

"What I think is happening here is the Democrat Party and the Chinese Communist Party have entered into a common cause to defeat Donald J. Trump and their whole strategy is based on blaming this administration for a global pandemic created by the Chinese Communist Party," said Navarro, the director of the Office of Trade and Manufacturing Policy.

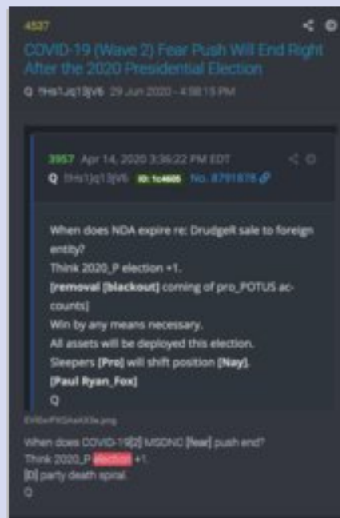

He blasted Democrats for faulting Trump for the coronavirus pandemic and failing to blame China during the Democratic National Convention. The coronavirus pandemic has killed more than 172,000 Americans and the subsequent recession has forced about 56 million Americans to file unemployment claims.

- > [10295469](#) Expanding a Hypothesis
- > [10383550](#) Navarro accuses Democrats of Colluding with China to defeat Trump?
- > [10383672](#) Some Q drops on Covid, China, Dems and the election

In evaluating Dr. Cowan's hypothesis that Covid-19, and perhaps influenza outbreaks in general, are really not transmittable viral infections but rather the body's own DNA, RNA and protein ball excretions responding to electromagnetic radiation poisoning as the world goes through periodic step-ups (in this case the international 5G rollout) in radiation levels, we need to consider Peter Navarro's accusations, which seem to align with many Q drops.

If Democrats, corporations, health NGOs & non-profits and the Chinese Communist Party were framing worldwide radiation poisonings for those most sensitive to radiation as a viral pandemic, they would need to have planned out with military precision the dates of everything. They would need the 5G rollouts worldwide to be carefully calibrated to be attributed to primarily air travel. Right before such a massive op went live, there would be a sudden blackout on communications and meetings.

In a scenario like this, you may not need all 5G companies. Perhaps some signal spectrums (intentionally?) affect the human body more severely than others. Careful planners would have backups and fail safe countries to rely on

for viral attribution should anything go wrong.

But the timing would be critical and with comms blackouts, almost any interruption could risk exposing the whole effort, or else everything would have to be delayed and re-calibrated to mask the true cause of the illnesses.

Only the first few confessions get any immunity, everyone else goes to prison.

Safest bet always is to defect and confess to the military.

The Prisoner's Dilemma

The prisoners dilemma is a hypothetical game set up showing a situation where people won't want to work together even when it's beneficial to do so. It's just a long way of saying people don't like to be taken advantage of. Is often game theory 101.

Related to the Nash Equilibrium.

Both Covid-19 and radiation poisoning cause a fever, shortness of breath and a persistent dry cough.

1. What is a Dry Cough? Experts Explain the Coronavirus Symptom

<https://www.health.com/condition/infectious-diseases/coronavirus/what-is-a-dry-cough>

You've heard the typical symptoms by now: fever, shortness of breath, dry cough—about 80 percent of those with COVID-19, the disease caused by the novel coronavirus (SARS-CoV-2), only get those mild signs, according to research. And while one of those symptoms—a cough—may sound pretty easy to diagnose, many are questioning what exactly a dry cough is, and how it's different from other coughs.

2. STEALTH BUG Did you have coronavirus earlier this year? The 8 signs Covid-19 may have already struck

<https://www.thesun.co.uk/news/11268689/did-you-have-coronavirus-earlier-year-signs/>
<https://www.yahoo.com/lifestyle/signs-youve-already-had-coronavirus-113643068.html>

And following the study that coronavirus started spreading in countries earlier than people were really tracking it - the theory that some people may have already been infected with the virus and recovered isn't an outrageous one.

In particular, you may find you have already experienced one (or some!) of the main symptoms associated with coronavirus at the start of the year - indicating you could have had Covid-19.

Many Brits will already be aware that the early warning signs include a dry cough, high temperature and shortness

of breath.

3. Radiation Pneumonitis

Definition

Radiation pneumonitis is an inflammation of the lung tissue. Radiation pneumonitis often appears between 6 and 24 weeks after radiation therapy.

Air moves through the airways into air sacs of the lungs called alveoli. The alveoli have several blood vessels that allow for gas exchange between the lungs and blood. Oxygen can pass from the lungs to the blood and carbon dioxide can pass from the blood to the lungs. Radiation pneumonitis causes inflammation in these alveoli. The inflammation can decrease the amount of oxygen that enters your body. If it remains untreated, pneumonitis can also lead to permanent tissue damage.

Causes

In most cases, radiation pneumonitis is caused by radiation therapy to the lungs.

You may develop a dry cough. The amount of sputum, or mucus, in your cough may increase as your radiation treatment progresses.

Things to Report to Your Nurse or Doctor

Tell your nurse or doctor if you have any of the following symptoms:

- Redness and/or tenderness of the skin
- Persistent cough
- Blood-streaked mucus
- Decrease in appetite
- Difficulty or discomfort when swallowing
- Weight loss of 5 pounds or more in one week
- Any new or unusual symptoms

Things to Report Immediately

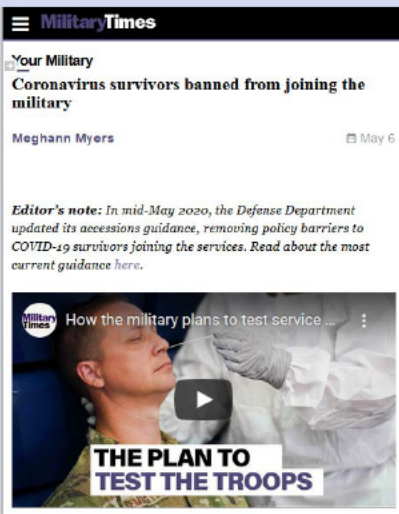

Call immediately if you have any of the following symptoms:

- Increase in shortness of breath
- Temperature of 100.5°F (38°C) or above
- Unusual bleeding
- Chest pain
- Chills

1. Coronavirus survivors banned from joining the military

<https://www.militarytimes.com/news/your-military/2020/05/06/coronavirus-survivors-banned-from-joining-the-military/>

As the Defense Department negotiates its way through the coronavirus pandemic and its fallout, military entrance processing stations are working with new guidance when it comes to bringing COVID-19 survivors into the services.

A past COVID-19 diagnosis is a no-go for processing, according to a recently released MEPCOM memo circulating on Twitter.

“During the medical history interview or examination, a history of COVID-19, confirmed by either a laboratory test or a clinician diagnosis, is permanently disqualifying ...” the memo reads.

“During the screening process, a reported history of confirmed COVID-19 will be annotated ‘Considered disqualifying’” pic.twitter.com/ZKx91AUbXo
— Free (@Nathaniel_Free) May 4, 2020

The memo is authentic, Pentagon spokeswoman Jessica Maxwell confirmed to Military Times.

Specifically, it lays out guidelines for MEPS staff to deal with potential, as well as confirmed, coronavirus cases. That starts with screening at all MEPS, which includes taking a temperature and answering questions about symptoms and potential contact.

2. Updated guidance allows unhospitalized COVID-19 survivors to join the military

<https://www.militarytimes.com/news/your-military/2020/05/07/updated-guidance-allows-unhospitalized-covid-19-survivors-to-join-the-military/>

The command in charge of processing new recruits into the services has updated its policy for accessing coronavirus survivors, loosening restrictions banning anyone who has been diagnosed to only those who were hospitalized because of complications.

The change came days after an original memo circulated on Twitter, causing an uproar in the face of a pandemic that will touch millions of Americans, according to public health estimates.

That guidance was part of an “interim” memo, which characterized a COVID-19 diagnosis as a no-go, updated on Wednesday, a defense official told Military Times.

“During the medical history interview or examination, a history of COVID-19, confirmed by either a laboratory test

or a clinician diagnosis, is permanently disqualifying ..." the memo reads.

Military Entrance Processing Command will now accept recruits who have previously tested positive for coronavirus as long as they haven't been hospitalized, the official confirmed, a clarifying update of what is still interim guidance.

Development of BIO 301 to Prevent Acute Radiation Syndrome and Mitigate the Delayed Effects of Acute Radiation Exposure

Posted June 10, 2020

Michael Kayser, Ph.D., Hamanetis Corporation

Protecting the health of U.S. military personnel during their performance of duty is essential in all environments, especially those known to contain chemical, biological, radiological, or nuclear (CBRN) hazards. Radiation sources can range from major radioactive materials, such as leaked nuclear fuel seen in the Fukushima Daiichi nuclear disaster, to common X-ray machines. Exposure to ionizing radiation can lead to cellular DNA damage that can cause health issues such as cancer, diabetes, heart disease, lung fibrosis, liver fibrosis, kidney fibrosis, and acute radiation syndrome (ARS), which affects the hematopoietic and gastrointestinal systems. Building on their Fiscal Year 2018 FY18 Technology/Therapeutic Development Award from the Peer Reviewed Medical Research Program (PRMRP), a team of researchers led by Dr. Michael Kayser obtained funding through the FY19 Joint Warfighter Medical Research Program (JWRMP) Medical Research and Development Award to expand development of BIO 301 (also termed BIO 300 Oral Powder) as a radiation medical countermeasure that provides pre-exposure prophylaxis against the damaging effects of ionizing radiation.

The active ingredient in BIO 300 Oral Powder, geminin, has shown promise for radioprotection but has eluded drug developers for decades due to its poor stability and low bioavailability. Geminin acts as a highly selective agonist of estrogen receptor-beta (ERβ), a transcription factor found throughout the body that regulates genes controlling the cell cycle, DNA damage repair, and differentiation. Regulation of ERβ-mediated gene expression by geminin delays the onset, severity, and response to DNA damage from ionizing radiation, which confers a radioprotective state to healthy cells. ERβ is also a tumor suppressor, and higher ERβ expression is prognostic for better patient outcomes following solid tumor radiotherapy. Previously, the Armed Forces Radiobiology Research Institute (AFRRI) and Hamanetis Corporation developed BIO 300 Oral Suspension, a patented formulation containing synthetic geminin nanoparticles. BIO 300 Oral Suspension is being developed as a supportive care agent for cancer patients undergoing radiation therapy via self-administration with pre-loaded oral syringes, and is currently being evaluated in a Phase 1/2a clinical trial (NCT02967798).

The BIO 300 Oral Suspension formulation does not lend itself to use by Warfighters in field operations. Thus, supported by their FY18 PRMRP award, Dr. Kayser's team designed a new formulation, BIO 300 Oral Powder, which is amenable to a solid dosing form (tablet, capsule, etc.) to better suit the needs of deployed Warfighters. The researchers rapidly developed and screened over 100 formulations, one of which (an excipient-free, immediate-release, orally administered formulation) exhibited highly improved oral bioavailability compared to BIO 300 Oral Suspension in animal studies and was sufficiently stable for further development efforts. This formulation can be either encapsulated or tableted to create the oral dosage form desired for field operability. Further, because the active pharmaceutical ingredient in BIO 300 Oral Powder matches that of BIO 300 Oral Suspension, the researchers are able to use the Oral Suspension data to support the rapid development and regulatory approval of BIO 300 Oral Powder.

The current FY19 JWRMP award supports non-clinical and clinical studies to advance the development of BIO 300 Oral Powder, including dosing and safety studies in mice, non-human primates (NHPs), and healthy human volunteers, as well as efficacy studies in NHPs. The non-clinical studies will be completed in collaboration with Dr. Vijay K. Singh (Uniformed Services University of the Health Sciences/AFRRI). The studies will also evaluate BIO 300 Oral Powder in combination with Hemaphysone, an FDA-approved drug for the treatment of hematopoietic sub-syndromes of acute radiation syndrome (H-ARS). Human efficacy studies to evaluate radiation medical countermeasures are not ethical, thus these studies are designed to meet the FDA's guidance for approval under the Animal Rule. Currently, the researchers have secured a subcontract for the NHP studies and are awaiting additional data from the FY18 PRMRP studies before beginning dose-scheduling experiments in mice. Once deemed safe and effective by the FDA, BIO 300 Oral Powder will substantially enhance operational preparedness efforts in radiological or nuclear threat scenarios, and its use could be expanded to protect other populations at risk for radiation exposure (e.g., astronauts and first responders).

Over the past few years, prior to the 5G rollout, there was a rush to wire nursing homes and hospitals with enterprise-grade Wi-Fi networks.

1. What Senior Living Providers Should Look for in Wi-Fi Solutions

<https://seniorhousingnews.com/2017/04/17/senior-living-providers-look-wi-fi-solutions/>

Implementing the right “guts” for robust senior living technology—or the right technology infrastructure—can be expensive, but it’s worth it, Peter Kress, vice president of technology and chief information officer at Acts Retirement-Life Communities, tells Senior Housing News. The West Point, Pennsylvania-based senior living provider began deploying Wi-Fi in its communities’ common spaces 17 years ago, in 2000; now, all 21 of Acts’ counting care retirement community (CCRC) campuses have Wi-Fi building-wide.

“That’s kind of one of the cornerstones to our approach to tech: free and available Wi-Fi in every corner of our building,” Vitality Senior Living Chief Information Officer David McBride tells SHN.

Vitality has also embraced the use of high bandwidth, as the provider also needs make sure it can also always provide mission-critical care, even while certain residents stream “a lot of” Netflix and Hulu.

“Residents are expecting a rich set of tech amenities, forcing all of us to up our game and make sure that we’re providing consumer-class experiences,” Kress says. “They don’t want to feel like they’re taking a step back in terms of the tech available to them.”

2. The truth about enterprise WiFi in senior care

<https://www.mcknightsseniorliving.com/home/columns/marketplace-columns/the-truth-about-enterprise-wifi-in-senior-care/>

Enterprise grade wireless is the only option any senior care community should be considering these days, in my opinion, and here’s why: Your future depends on it.

That may sound like an exaggeration, but consider the technology investments, the people and the outcomes relying on it. Regulatory requirements, the push toward greater efficiency and mobility, staff retention and resident safety and satisfaction are just a few of the challenges on your plate — and all are linked to successful technology implementations in some manner.

The truth is, wireless infrastructure in the senior care sector is sometimes an afterthought, when it really should be a starting point for success.

3. The Truth of WiFi for Long Term Care

<https://www.deepbluecommunications.com/wp-content/uploads/2017/04/WiFi-for-Long-Term-Care.pdf>

From mobile health technology to concierge services, long term and healthcare facilities need to make sure the exchange of data is reliable, secure and efficient across all platforms and locations. A solid Wi-Fi network is the most important factor to keep things running smoothly. With new solutions that streamline the sharing of health records, centralize communication within communities and provide live resident data for those providing health care, those who choose not to “go wireless” as a foundation could lose competitive edge.

4. Managed WiFi: Managing secure private WiFi networks helps improve the customer experience.

<https://business.comcast.com/enterprise/products-services/managed-services/managed-wifi>

- > [10423570](#) Prior to the 5G rollout, there was a rush to wire nursing homes & hospitals with enterprise-grade Wi-Fi

And then health care facilities began to upgraded to 5G, which is described as a hybrid between WiFi and traditional cell towers. Think of it as having cell towers inside your building and in every corner.

1. Four ways 5G is transforming the medical field

<https://www.rcrwireless.com/20200204/5g/4-ways-5g-is-transforming-medical-field>

There doesn't seem to be a single vertical that isn't being transformed by the next generation of cellular technology. From farming to gaming to driving to work, 5G is promising to be a ubiquitous force in our daily lives. One such area that has experienced a number of recent 5G developments is the medical field, where experts are changing the way doctors and nurses do their jobs and how patients receive care.

2. 5G: Are we ready for the next generation?

<https://www.healthcareitnews.com/news/europe/5g-are-we-ready-next-generation>

All over the world, 5G networks are on the brink of rollout, and some think that it is healthcare where most benefits can be expected. But is this really the case? Or are we only hyping technology instead of healthcare once again?

3. Private 5G can solve some enterprise problems that Wi-Fi can't

<https://www.networkworld.com/article/3568614/private-5g-can-solve-some-enterprise-problems-that-wi-fi-can-t.html>

Outside of particularly unusual use cases, private 5G networks are best thought of as a supplementary to Wi-Fi and not a competitor, experts say, even though that's clearly an ambition of the carriers. For example, Mo Katibeh, an executive vice president at AT&T Business in charge of products and platforms, said 5G is inherently secure and doesn't face the interference problems Wi-Fi does, so eventually it will challenge Wi-Fi.

4. 5G couldn't have come to health care at a better time

<https://www.cnet.com/news/5g-couldnt-have-come-to-health-care-at-a-better-time/>

The heavy bandwidth pipe required for those speedy response times is slowly becoming reality. 5G, which is seen pushing many key technologies like self-driving cars in the future, is expected to serve as a key pillar in health care, enabling fast data rates, rapid-fire responsiveness and dependable connections.

5. VA facility claimed as 'world's 1st' 5G-enabled hospital

<https://www.healthcarediver.com/news/va-facility-set-to-become-worlds-1st-5g-enabled-hospital/571823/>

CNBC: There are three types of 5G — most of what you'll get is not the super-fast kind

<https://www.cnn.com/2020/01/09/what-is-5g-heres-what-verizon-att-sprint-and-t-mobile-offer.html>

There are three types of 5G being built in the U.S. including low-band, mid-band and high-band mmWave 5G. It's confusing for consumers, especially since there aren't phones that support all three yet. AT&T, Verizon and T-Mobile/Sprint all have different strategies.

The four major U.S. wireless companies [AT&T](#), [Verizon](#), [T-Mobile](#) and [Sprint](#) all have their own plans for how to build out 5G to their customer bases. Their strategies relate both to their current wireless spectrum holdings and future plans to build fiber into the ground, which is essential for the fastest type.

Here's the cocktail conversation summary:

mmWave high-band 5G: T-Mobile (a little), AT&T and Verizon. About 10x faster than LTE with extremely low latency, which means individual messages are transmitted almost instantaneously. But you need to be standing really close to a tower or transmitter to get those speeds.

Mid-band 5G: Sprint. About 6x faster than LTE, but with a smaller footprint than low-band.

Low-band 5G: T-Mobile/AT&T. About 20 percent faster than 4G LTE.

Millimeter wave is the "best" 5G. If you download a 4GB file, like a movie, you might be able to do that in about 5 minutes and 19 seconds on today's fastest 4G LTE networks (assuming a 100Mbps connection). On a mmWave high-band 5G connection, that same movie would take only 32 seconds (assuming 1000Mbps). But PCMag says that you have to stay within 80 feet of a tower or transmitter to get those speeds.

Today, T-Mobile has a nationwide low-band 5G network and smaller (but much faster!) mmWave 5G networks in select areas of six U.S. cities. It sells two phones that work on the low-band network but only one that works on mmWave. It doesn't currently sell any phones that work on both.

Sprint is building a mid-band network that's available in parts of 9 cities, and it says this network is 6x faster than LTE. Sprint sells four devices that run on its network, including three phones.

AT&T has a low-band network in 20 markets for "consumers" and faster mmWave "5G+" networks in small areas of 35 markets for businesses. Like T-Mobile, it doesn't sell phones or devices that support both networks yet. You can pick the Galaxy Note 10+ 5G for the low-band network or, if you're a business user, the Galaxy S10 5G phone or NETGEAR Nighthawk 5G Mobile hotspot.

5G emitters cover much smaller areas and they need a lot more of them. They're putting them on buildings, homes and even lampposts without any community notification. You might have no way of knowing if there is an emitter near your home, or a family member's nursing home.

Unless you have a geiger counter or an em reader.

1. (ZDNet) Wiring for wireless: 5G and the tower in your backyard
<https://www.zdnet.com/article/wiring-for-wireless-5g-and-the-tower-in-your-backyard/>

In the cities and municipalities of America, people's fears and misunderstandings about the onset of 5G wireless come to a head. Now, lawmakers and public officials are being prompted to make sudden moves that could change everything.

2. 5G Cell Towers – Are They Safe & Who Decides Where They Go?
<https://www.celltowerleaseexperts.com/cell-tower-lease-news/5g-cell-towers-are-they-safe-who-decides-where-they-go/>

3. (CNet) Is 5G making you sick? Probably not
<https://www.cnet.com/news/is-5g-making-you-sick-probably-not/>

The rollout of 5G using super high-frequency radio airwaves has ignited old fears about cellphone radiation risks, with the coronavirus conspiracy theories being the latest wrinkle.

4. (Guardian) Revealed: 5G rollout is being stalled by rows over lampposts
<https://www.theguardian.com/technology/2019/may/19/revealed-5g-rollout-is-being-stalled-by-rows-over-lampposts>

The rollout of the 5G telecommunications network is being stalled by at least two years over legal wrangling about the control of millions of lampposts, the Guardian can reveal.

Lampposts have suddenly become hot property because 5G requires the installation of transmitters on a dense network of masts taller than a double-decker bus. As a result, mobile network operators (MNOs) are clamouring for access to lampposts and other tall structures in cities, and are threatening legal action to any local authorities or landlords who stand in their way.

1. "Cuomo killed my mom"

<https://twitter.com/CuomoWatch/status/1258959294889897991>

"Cuomo Killed My Mom. Prominently displayed in upstate New York. Andy's edict forcing #COVID19 people into the nursing homes was the worst idea ever."

2. (Tiger Droppings) "Cuomo killed my mom"

<https://www.tigerdroppings.com/rant/politics/giant-cuomo-killed-my-mom-sign-erected-on-bridge/89939349/>

Many New Yorkers are ushering in a grim Mother's Day this year amid accusations that Governor Andrew "Cuomo killed my mom" thanks to his deadly policy that forced nursing homes to admit coronavirus patients.

The bone-headed move resulted in the deaths of thousands of senior citizens living in nursing homes.

Cuomo mandated that nursing homes must accept coronavirus patients even though older people are the most at-risk to die from COVID-19. Making matters worse was the fact that nursing homes did not have personal protective equipment or COVID testing capability.

Shockingly, the mainstream media not only gave Cuomo a pass on the scandal, but lionized him as a hero.

3. (USAToday) Janice Dean: COVID-19 killed my in-laws after Cuomo's reckless New York nursing home policy

VOICES

Janice Dean: COVID-19 killed my in-laws after Cuomo's reckless New York nursing home policy
At first we didn't blame anyone for my in-laws' deaths. This is a pandemic, after all. Then we learned about a policy that put them in danger.

Janice Dean

Opinion contributor

Gov. Andrew Cuomo's motto during the coronavirus pandemic has always been "New York Tough."

It's the title of the new poster he commissioned and is selling to commemorate what appears to be his own personal journey during the COVID-19 pandemic.

But when it comes to tough questions about his leadership during this time, Cuomo has shown he isn't so tough after all. In fact, he prefers to place blame on anyone but himself for the disastrous decisions he's made.

Last week, the governor held a press conference to reveal his poster. It's a picture of a mountain that represents the deadly "curve" found on a graph depicting more than 32,000 deaths in New York state. There are plenty of inside jokes on his mountain of death including a cartoon drawing of presumably his daughter's boyfriend hanging off a cliff, the governor's fancy sports car that he likes to pose with on Instagram and a giant nose with a cotton swab inside of it. That is, apparently, a nod to an insensitive, giggling interview involving a giant cotton swab he did with his brother on CNN around the height of the pandemic in May.

My family didn't have to die

Many of us aren't laughing. My husband's parents died of coronavirus in their elder care facilities. We lost his dad in late March and his mom two weeks later. My family wasn't able to see them before they died, they weren't given last rites, wakes, or funerals. They died alone.

Mickey and Dee Newman spent their entire lives in Brooklyn. They were true New Yorkers. Mickey was a retired New York City Fire Department firefighter who served in the U.S. Air Force. Dee helped raised three kids and was a devoted grandmother. They lived in a four story walk up in Brooklyn for 50 years, until their health deteriorated and they required constant care. They died only a few months after being placed in their elderly care homes. Not a day goes by where we don't think of them.

1. (May 18, 2020) ABC News: Trump says he's taking hydroxychloroquine

<https://www.youtube.com/watch?v=1I9Bb8Fbui0>

President Donald Trump on Monday revealed to reporters he's been taking hydroxychloroquine, the anti-malaria drug he's touted as a possible "game changer" treatment for COVID-19.

2. (April 8, 2020) Trump-backed anti-malaria drug

hydroxychloroquine is the most effective coronavirus treatment currently available, finds international poll of 2,000 doctors

Poll of 2,171 clinicians from 30 nations said malaria drug was most effective
Doctors across Europe, the US and China have been given licence to prescribe
But the UK is dragging its feet until clinical trials show it is safe and effective
World Health Organization claims that no medicine can prevent or cure virus

been Saved by HCQ

2. Noted Yale Epidemiologist: Dr. Fauci and FDA Have Caused the 'Deaths of Hundreds of Thousands of Americans' that Could Have been Saved by HCQ

<https://www.thegatewaypundit.com/2020/08/huge-noted-yale-epidemiologist-dr-fauci-fda-caused-deaths-hundreds-thousands-americans-saved-hcq-video/>

Dr. Risch is an outspoken proponent of hydroxychloroquine treatment for COVID-19.

According to Dr. Steven Hatfill at Real Clear Politics, and as we have reported here at The Gateway Pundit numerous times, there are dozens of global studies that show hydroxychloroquine is an effective treatment for COVID-19.

- ** 53 global studies that show positive results with HCQ on COVID-19
- ** 14 global studies that show neutral or negative results with HCQ on COVID-19
- ** 10 of those 14 negative studies were of patients in very late stages of the disease
- ** 2 of those 14 negative studies were by the same doctor in Minnesota
- ** 1 of the studies used by Dr. Fauci from a Brazilian outlet was debunked
- ** The last study by Lancet was later found fraudulent and retracted

According to Dr. Risch — Dr. Fauci is now responsible for hundreds of thousands of deaths and must be stopped!

Dr. Risch described how Dr. Fauci allowed at least 17,000 AIDS victims to die by not certifying an effective drug for treatment back in the 1980s.

Dr. Risch now argues the Dr. Fauci is doing the same thing with the coronavirus!

Dr. Risch: This has gone on before. Now we have Dr. Fauci denying that any evidence exists of benefit (of HCQ). And that's pervaded the FDA. The FDA has relied on Dr. Fauci and his NIH advisory groups to make the statements saying that there is no benefit in using hydroxychloroquine in outpatients. And this is counter to the facts of the case. The evidence is overwhelming... Dr. Fauci and the FDA are doing the same thing that was done in 1987 and that's led to the deaths of hundreds of thousands of Americans that could have been saved by the usage of this drug! And this is the same thing that the FDA has done. It's outrageous! People need to be writing or calling their congressman or senators and complaining that this is not the way the country should work!
