They interact with graphene oxide, which is in the Covid vaccinations, and cross the blood-brain barrier. Once in the brain, 5G can manipulate the graphene oxide to do god knows what. Presumably control your moods and emotions. Perfect for controlling people and preventing violent revolts when the global financial system completely collapses within the next few years.

have some EMF whitepills (blackpills if you don't live somewhere where you can regularly go barefeet on good soil)

<https://pubmed.ncbi.nlm.nih.gov/18047442/>

>«The most reasonable hypothesis to explain the beneficial effects of earthing is that a direct earth connection enables both diurnal electrical rhythms and free electrons to flow from the earth to the body. It is proposed that the earth's diurnal electrical rhythms set the biological clocks for hormones that regulate sleep and activity. It is also suggested that free electrons from the earth neutralize the positively charged free radicals that are the hallmark of chronic inflammation.»

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4378297/>

>«The living matrix (or ground regulation or tissue tensegrity-matrix system), the very fabric of the body,

appears to serve as one of our primary antioxidant defense systems. As this report explains, it is a system requiring occasional recharging by conductive contact with the Earth's surface – the “battery” for all planetary life – to be optimally effective.»

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3265077/>

>«Reconnection with the Earth's electrons has been found to promote intriguing physiological changes and subjective reports of well-being. Earthing (or grounding) refers to the discovery of benefits—including better sleep and reduced pain—from walking barefoot outside or sitting, working, or sleeping indoors connected to conductive systems that transfer the Earth's electrons from the ground into the body.»

<https://pubmed.ncbi.nlm.nih.gov/28987038/>

>«Emerging research has revealed that direct physical contact with the surface of the planet generates a kind of electric nutrition, with surprisingly potent and rapid anti-inflammatory and antioxidant effects.»

>> ☐ **Anonymous** (ID: P9KV2kx+) 11/19/22(Sat)15:13:15 No.405153126 ►
File: [Plant growth - crystal.png](#) (460 KB, 853x599)

>>405152816

Could be.

>>405152780

Has anyone else confirmed this bluetooth hypothesis? Is there a separate bandwidth for vaxxies?

Apparently crystal can actually help plants grow. Perhaps because they organize the cell water into a higher energy state.

undoubtedly

same for humans

see: >>405152925

see especially the third link, i.e.:

><https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3265077/>

>2.3. Earthing Reduces Electric Fields Induced on the Body

>Voltage induced on a human body from the electrical environment was measured using a high-impedance measurement head. Applewhite, an electrical engineer and expert in the design of electrostatic discharge systems in the electronic industry, was both subject and author of the study. Measurements were taken while ungrounded and then grounded using a conductive patch and conductive bed pad. The author measured the induced fields at three positions: left breast, abdomen, and left thigh.

>Each method (patch and sheet) immediately reduced the common alternating current (AC) 60Hz ambient voltage induced on the body by a highly significant factor of about 70 on average. Figure 2 shows this effect.

>The study showed that when the body is grounded, its electrical potential becomes equalized with the Earth's electrical potential through a transfer of electrons from the Earth to the body. This, in turn, prevents the 60Hz mode from producing an AC electric potential at the surface of the body and from producing perturbations of the electric charges of the molecules inside the body. The study confirms the “umbrella” effect of earthing the body explained by Nobel Prize winner Richard Feynman in his lectures on electromagnetism. Feynman said that when the body potential is the same as the Earth's electric potential

(and thus grounded), it becomes an extension of the Earth's gigantic electric system. The Earth's potential thus becomes the "working agent that cancels, reduces, or pushes away electric fields from the body."

>> ☐ **Anonymous** (ID: +tsXUtlS) 11/19/22(Sat)15:17:20 No.405153547 ► [>>405153876](#)

[>>405153347](#)

well, sand is actually not a particularly good conductor, and dry and sandy soils are not ideal for earthing what you want is essentially really good soils with very fine particles, especially clay soils (but silt soils are also good)

>> ☐ **Anonymous** (ID: +tsXUtlS) 11/19/22(Sat)15:18:54 No.405153703 ► [>>405153819](#) [>>405154040](#)

[>>405152713](#)

[>>405153347](#)

>Upon earthing, about half the subjects showed an abrupt, almost instantaneous change in root mean square (rms) values of electroencephalograms (EEGs) from the left hemisphere (but not the right hemisphere) at all frequencies analyzed by the biofeedback system (beta, alpha, theta, and delta).

>All grounded subjects presented an abrupt change in rms values of surface electromyograms (SEMGs) from right and left upper trapezius muscles. Earthing decreased blood volume pulse (BVP) in 19 of 22 experimental subjects (statistically significant) and in 8 of 30 controls (not significant). Earthing the human body showed significant effects on electrophysiological properties of the brain and musculature, on the BVP, and on the noise and stability of electrophysiological recordings. Taken together, the changes in EEG, EMG, and BVP suggest reductions in overall stress levels and tensions and a shift in ANS balance upon earthing. The results extend the conclusions of previous studies.

[>>405152713](#)

[>>405153364](#)

[>>405153703](#)

>2.4.2. Confirming Shift from Sympathetic to Parasympathetic Activation

>A multiparameter double-blind study was designed to reproduce and expand on previous electrophysiological and physiological parameters measured immediately after grounding with an improved methodology and state-of-the-art equipment [20]. Fourteen men and 14 women, in good health, ages 18–80, were tested while seated in a comfortable recliner during 2-hour grounding sessions, leaving time for signals to stabilize before, during, and after grounding (40 minutes for each period). Sham 2-hour grounding sessions were also recorded with the same subjects as controls. For each session, statistical analyses were performed on four 10-minute segments: before and after grounding (sham grounding for control sessions) and before and after ungrounding (sham ungrounding for control sessions). The following results were documented:

>i. an immediate decrease (within a few seconds) in skin conductance (SC) at grounding and an immediate increase at ungrounding. No change was seen for the control (sham grounding) sessions;

>ii. respiratory rate (RR) increased during grounding, an effect that lasted after ungrounding. RR variance increased immediately after grounding and then decreased;

>iii. blood oxygenation (BO) variance decreased during grounding, followed by a dramatic increase after ungrounding;

>iv. pulse rate (PR) and perfusion index (PI) variances increased toward the end of the grounding period, and this change persisted after ungrounding.

>The immediate decrease in SC indicates a rapid activation of the parasympathetic nervous system and corresponding deactivation of the sympathetic nervous system. The immediate increase in SC at cessation of grounding indicates an opposite effect. Increased RR, stabilization of BO, and slight rise in heart rate suggest the start of a metabolic healing response necessitating an increase in oxygen consumption.

[>>405153547](#)

I used to live on a beach and would barefoot walk every day after work. I would notice significant stress reductions.

I think it might be more about the earth's magnetic field, than electrical conductivity. Some sands are rich in iron as well.
One of the yoga books on earthing that I read actually recommends slightly damp beach sand as being the best soil for earthing.
There are all sorts of electromagnetic currents in the earth, so some spots are more potent than others, but the concrete jungle in cities is considered to be the worst for barefoot walking.
