psychotronics

The Shai Society General Secretary, Michael S. Shai, has agreed to release related information and evidence to those who believe in human free will, including scientists, philosophers, physicists, and historians. This process of psychological research is known as "Psychotronics". It is a process of psychological research that involves studying the human mind and its ability to control the external world by using video signal processing and analysis. After release, PTFP has also considered publishing a book on the subject.
