I have this pic saved? is this what we were looking at?

Anonymous 10/24/2016 (Mon) 12:18:18 Id: f39cea [Preview] No. 20371 [Hide User Posts] [X] del

What post are we looking for?

Anonymous 10/24/2016 (Mon) 12:20:49 Id: 29b610 [Preview] No. 20372 [Hide User Posts] [X] del

I don't have the insurance files, so cannot test. Can anyone verify?

Anonymous 10/24/2016 (Mon) 12:26:40 Id: 29b610 [Preview] No. 20374 [Hide User Posts] [X] del   >>20375 >>20378

While I'm here, would like to mention The List.

h ttps://ww w.reddit.com/r/OPTheList/

My theory: The leaks are out there and select people are compiling for a media release.

Anonymous 10/24/2016 (Mon) 12:27:57 Id: f39cea [Preview] No. 20375 [Hide User Posts] [X] del   >>20376

>>20374
Fuck this list, its just fucken stupid and will do more harm then good.. save it for the day of the rope.
If you want to do anything you are better off scaring mothers with pictures of the massive amount of immigrants in calais.

Anonymous 10/24/2016 (Mon) 12:29:21 Id: 29b610 [Preview] No. 20376 [Hide User Posts] [X] del   >>20377 >>20382

>>20376
where is the keys that got posts deleted?

Anonymous 10/24/2016 (Mon) 12:33:17 Id: e6177b [Preview] No. 20378 [Hide User Posts] [X] del   >>20379

>>20374

Perhaps I'm misreading you. Why do you think this is relevant to WL insurance?

"The List" is a PsyOp from full chan to fuck with (((journos)))). The PGP stuff on the sub is just to scare the normies... isn't it?

Anonymous 10/24/2016 (Mon) 12:35:48 Id: 29b610 [Preview] No. 20379 [Hide User Posts] [X] del   >>20380

>>20378
Nope, don't think so.

On FullChan, The List is probably a psy-op to DISCREDIT the real List operation by associating it with Pepe/Alt-Right.

Anonymous 10/24/2016 (Mon) 12:37:31 Id: 29b610 [Preview] No. 20380 [Hide User Posts] [X] del   >>20381 >>20384

>>20379
Sorry, just in case I was unclear...

The List is THE LIST of people implicated in WL Insurance.

Anonymous 10/24/2016 (Mon) 12:55:12 Id: e6177b [Preview] No. 20381 [Hide User Posts] [X] del >>20382 >>20383

>>20380
I am 90% certain someone was claiming to own the reddit ListCompiler account on the original thread. That entire sub is literally the same trolling they were doing on twitter?

If keys, imgs and posts were being deleted in both insurance/key threads on fullchan, why would they allow all the (faux?)crypto stuff to remain on that subreddit? If it was valuable it would have been disappeared?

Anonymous 10/24/2016 (Mon) 12:59:23 Id: f39cea [Preview] No. 20382 [Hide User Posts] [X] del >>20384

>>20376
>>20381
The List is stupid LARPing, they posting keys and shit there to scare the journos that dig to find out who they are.

The crypto stuff on the key thread was actually important stuff and unrelated. that whole thread is gone now.

Anonymous 10/24/2016 (Mon) 13:00:14 Id: 032269 [Preview] No. 20383 [Hide User Posts] [X] del

>>20381
Perhaps your correct if that's the case.

I didn't go in The List thread. Looked cuckchan tier.

However, I do feel confident that the key (or at least part of it) is out there. The silence in those threads makes me wonder if posters are being black-listed.

Anonymous 10/24/2016 (Mon) 13:06:11 Id: e6177b [Preview] No. 20384 [Hide User Posts] [X] del >>20385

>>20380
>>20382
Thanks for confirmation, thought I was going mad for a second.

What we actually need is whatever the fuck was getting deleted from both fullch threads ("insurance files key testing" thread and "insurance keys may may actually have been released" thread).

Anonymous 10/24/2016 (Mon) 13:09:40 Id: f39cea [Preview] No. 20385 [Hide User Posts] [X] del >>20386

>>20384
No one with keys from that thread came here, Endchan may be a diversion thread. If it was something important they may have moved to somewhere else and pointing to endchan a diversion and sign to those in the know.

Anonymous 10/24/2016 (Mon) 13:11:21 Id: e6177b [Preview] No. 20386 [Hide User Posts] [X] del >>20387

>>20385
I considered that, especially as it's so quiet over here.

Not sure where else there is to go for lurkers like me tbh. Disinfo everywhere.

Anonymous 10/24/2016 (Mon) 13:22:43 Id: 032269 [Preview] No. 20387 [Hide User Posts] [X] del

>>20386
My only thought was that there was something in the files themselves stating where to go and not to spread the key yet.

Anonymous 10/24/2016 (Mon) 13:24:03 Id: 3bdc26 [Preview] No. 20388 [Hide User Posts] [X] del >>20406 >>20407 >>20408
(295.46 KB 1440x2457 Turingthe2ndwlkeys.jpg) (61.91 KB 1174x851 Possiblekeys.png) (55.40 KB 548x864 Possiblelarpkeys.jpg)

Here's a couple of pictures out of those threads, just to make sure they're in both places.

Anonymous 10/24/2016 (Mon) 13:26:30 Id: f309d9 [Preview] No. 20389 [Hide User Posts] [X] del >>20390 >>20392 >>20409

I don't know what exactly we are missing / what got deleted, but I saved some pics from the fullchan threads you mentioned. looks like it's useless stuff but should I post them here anyway? Pretty sure it's nothing tho

Anonymous 10/24/2016 (Mon) 13:28:47 Id: 3bdc26 [Preview] No. 20390 [Hide User Posts] [X] del

the other pics I have are already here, so I think this is everything we got

Anonymous 10/24/2016 (Mon) 13:45:39 Id: f39cea [Preview] No. 20394 [Hide User Posts] [X] del >>20410

I think a lot of newfags here and no one that was actually testing keys in otherchan.
prove me wrong, who here actually knows what was posted in the other thread? I think everyone here is lurkers who have no idea what happened

During the DDoS attack a few hashes and keys were posted on several sites for a few minutes and then deleted without a trace.

Additionally, the Wikileaks site showed "The Insurance files may have just been released" for a few minutes as well. (see h ttps://i.imgur.com/6IMYfUK.png)

I have begun trying some of the candidate keys. I could use some help. I think the least we can do is try them and keep track of the results and what has been tried.

Files:
h ttps://file.wikileaks.org/torrent/2016-06-03_insurance.aes256.torrent
h ttps://file.wikileaks.org/torrent/wikileaks-insurance-20120222.tar.bz2.aes.torrent

What's happening fams? Why are posts being deleted on DMS threads?

Anonymous 10/24/2016 (Mon) 19:31:27 Id: e73b0c [Preview] No. 20420 [Hide User Posts] [X] del >>20421 >>20423

(1.23 MB 1004x8627 screenshot-twitter.com 2016-10-24 12-27-39.png)

This was mentioned on 8ch and plebbit a couple days ago, dunno if it's important but it might be. It would be somewhat safe to release keys or other important info on an obscure twitter account.

I did some searching, doing an accidental search I found this:

h ttps://www.reddit.com/r/Hypothesizing_A858/

Which lead me to trying this url:
h ttps://www.reddit.com/r/A858DE45F56D9BC9/

Going back to the Hypothesizing subreddit, I went to the link described in their sticky. The /r/Solving_A858 subreddit. There they had another sticky where one can deduct that this was all a "game/puzzle/mystery":
h ttps://www.reddit.com/r/Solving_A858/comments/54tnc8/some_closure/

For the lazy, here is most of the sticky:

>/u/fragglet and I have had contact with the person behind A858. Some of you may already know about this and I apologize for how long it has taken us to release this info. It has been a big point of discussion among the mods over the past week or so and we have finally decided to handle it. We won't be releasing any information about the people behind A858 other than it was a project funded by an unknown (to us) company for an unknown (to our contact) purpose.
>The person we spoke with said that he was paid to post code puzzles using encryption or various methods of text manipulation. He said that creating puzzles is a difficult thing to do because you never really know how hard it is to solve for others until you put it out there. Along with the puzzles, he said the majority of posts contained random data that was encrypted. Even if we used the right key to decrypt them we wouldn't have noticed.
The company would occasionally request posts be made to draw interest to the project. This would include the Stonehenge, April Fool's post, and various others found on the wiki. He says that all of the TeamW posts were made for the same purpose even though it didn't seem to bring more interest.
>He didn't answer many questions about specific posts but he did discuss the dogecoin addresses. He says that people were meant to donate to it and any users who solved puzzles would receive the dogecoin for it. Of course this didn't work out, nobody wanted to give money to an unknown person.
>He has said that the company paying him no longer wanted to fund the project and shut it down. It sounds like there will not be a reboot and the project is completely finished even though it remains mostly unsolved.
>This brings me to the final point where we discuss what we will be doing with this subreddit. For now the subreddit will remain open. There is a good amount of discussion and information here so we don't want to remove any of that.
>It has been a good run, but everything has to end sometime. If you have any questions, feel free to ask. The other mods and I will answer what we can.
>Thank you all and thank you A858 for an enjoyable few years.

The interesting part of this is:
>We won't be releasing any information about the people behind A858 other than it was a project funded by an unknown (to us) company for an unknown (to our contact) purpose. The person we spoke with said that he was paid to post code puzzles using encryption or various methods of text manipulation. He said that creating puzzles is a difficult thing to do because you never really know how hard it is to solve for others until you put it out there. Along with the puzzles, he said the majority of posts contained random data that was encrypted. Even if we used the right key to decrypt them we wouldn't have noticed.

I feel this is a dead end with regards to the DMS. But the company might be related to the subject of this thread. For what purpose? Maybe to test security of their DMS keyparts or whatnot...

>>20436
for fuck's sake, no. Whatever is killing the posts in 4 and 8 could come here with the masses.

☐ **Anonymous** 10/24/2016 (Mon) 22:36:04 [Preview] No. 20438 [X] del >>20441

>>20437
Well then let's get organized in some way. I've been trying keys for two days alone and only have space for insurance file A.

☐ **Anonymous** 10/24/2016 (Mon) 22:54:02 Id: c8b895 [Preview] No. 20440 [Hide User Posts] [X] del >>20443

>>20436
I don't possess the files, unfortunately, so cannot test.

And my bandwidth at the moment is not sufficient to download the files.

Recommend everyone download Tox and communicate there. Everything else is being censored/deleted.

☐ **Anonymous** 10/24/2016 (Mon) 22:56:58 Id: c8b895 [Preview] No. 20441 [Hide User Posts] [X] del >>20444

>>20438
If anyone gets hold of the key(s), my recommendation:
Send transactions on the Bitcoin blockchain and attach the key(s) as a message (using OP_RETURN).

Once on the blockchain, it'll be INSANELY difficult to reverse/censor.

If your transaction doesn't get through (in the case that they have the capability to censor the blockchain) post them in reverse and then link to transaction.

☐ **Anonymous** 10/24/2016 (Mon) 22:57:32 [Preview] No. 20443 [X] del

>>20440
You can still look into the posts that were deleted.

I wasn't able to get Tox to work without killing my connection.

☐ **Anonymous** 10/24/2016 (Mon) 23:00:18 [Preview] No. 20444 [X] del >>20450

>>20441
Is there anything else we can do beside archive.org and google cache to try to find the deleted posts?

Information regarding the last password used by Assange:

EDITED TO ADD (9/1): From pp 138-9 of WikiLeaks:

Assange wrote down on a scrap of paper: ACollectionOfHistorySince_1966_ToThe_PresentDay#. "That's the password," he said. "But you have to add one extra word when you type it in. You have to put in the word 'Diplomatic' before the word 'History'. Can you remember that?"

I think we can all agree that that's a secure encryption key.

EDITED TO ADD (9/1): WikiLeaks says that the Guardian file and the insurance file are not encrypted with the same key. Which brings us back to the question: how did the encrypted Guardian file get loose?

EDITED TO ADD (9/1): Spiegel has the detailed story.

That particular glp thread from 2010 was def deleted and not cached.The url is h ttp://ww w.godlikeproductions.com/forum1/message1148625/pg1 if anyone
knows an alt cache.

Has steg on the pic of JA's recently deceased friend been tried? Odd that it was posted w/out comment. I wish I could steg but I can't. If I could I'd try any pics
tweeted by JA around that time.

I'm searching the BTC blockchain for any keys of 64byte length.

So far, these two:
d5591d1c1656adc05ad0460ce8c038551ef3f721614f70d5bf8ac0df2fe5a06c
56bdcb939f8e1c40f51b0e478078a24fc9cf289fdbe86b1d6df96ec9f2137950

Anyone care to test?

Anonymous 10/25/2016 (Tue) 05:15:51 [Preview] No. 20495 [X] del >>20497

a link just showed up h ttps://82.221.129.208 the dude is saying he's hosting the unlocked files for a few days

Alright, so what I'm currently doing is seeing if he set the DMS to shoot transactions to the Bitcoin Blockhain (giving it permanence).

This is, undoubtedly, the best way to get the keys out without fear of censorship.

I don't have the insurance files and have no idea how they were encrypted.

However, there are several 64byte keys in the blockchain, sometimes occurring in sequence. Take this sequence for example:
157b55f541c211e4e8fbd6075ee38591166520382496715f061b72dbff7ce2ac
29d702481029f8ec2a53e45b7f1cbbcfe0e5e8f8729ff8dd039d79678af161dd

From block 435225 @ 2016-10-21 08:27GMT.

11 transactions there = 11 * 64 = 704. (odd number)

This is probably too bigger key for the WL files, I think?

Anyone give me a clue as to what size I should be looking for? I don't think transactions are definitely sequential and there's no promise for their inclusion in a block.

Are you on a Unix OS?

If I write a Bash script that permutated these keys and added them together to bruteforce, would you run it?

I've collected quite a few of these. And I do feel pretty convinced that Assange would've been clever enough to think of storing on the Blockchain.

Anonymous 10/25/2016 (Tue) 05:44:03 [Preview] No. 20503 [X] del >>20504

>>20502
I can run it but I only have file A. We need to get a couple of people together to try on all 4.

I think file A and the latest one (88GB) are the most likely to be unlocked with the keys floating around.

>>20505
Fuck. Was hoping it was a bit quicker.

Still collecting them from the chain. But I'm thinking JA would probably shoot an "incoming" type message preceding it. Haven't seen anything of the sort yet.

Anonymous 10/25/2016 (Tue) 06:09:49 [Preview] No. 20507 [X] del

>>20506
I think if the key went out, it probably happened on Oct 16.

Anonymous 10/25/2016 (Tue) 06:59:06 [Preview] No. 20510 [X] del >>20512 >>21077

Just read this:

> If anyone gets hold of the key(s), my recommendation: Send transactions on the Bitcoin blockchain and attach the key(s) as a message (using OP_RETURN). Once on the blockchain, it'll be INSANELY difficult to reverse/censor. If your transaction doesn't get through (in the case that they have the capability to censor the blockchain) post them in reverse and then link to transaction.

> Maybe this is what Snowden was doing when he tweeted that hash?

I have a whole list of 64byte strings recovered, but I might be wasting your time... no idea what size the key would be.

Six digit stuff is the block that these are in.

The further I go though, the more I think these are for something else (too many of them - or alphabets are trying to poison the signal).

By my calc... Keys WL is using are aes256. 256bits = 32bytes. These are too big?

Any /tech/ people here?

These have been sifted by hand, so there might be some missing.

I don't have good bandwidth. But I definitely think the DMS being in the blocks is an avenue definitely worth investigating.

If I were to do similar, that is 100% how I would do it (uncensorable, irreversible, un-shutdownable).

Anonymous 10/25/2016 (Tue) 08:21:57 [Preview] No. 20522 [X] del   >>20523

>>20519
>>20518

I am saving all of these to run with a script later tomorrow.

Just a few questions, did you find this transaction information by looking for Snowden's hash? Wikileak hashes? Which part of the blockchain has the keys you are generating?

Anonymous 10/25/2016 (Tue) 08:28:06 Id: 6d577c [Preview] No. 20523 [Hide User Posts] [X] del   >>20524

>>20522
This was literally done by hand by looking at:
h ttps://coinsecrets.org/

If I had better internet, I would've automated it somewhat.

Looks like this API might be usable.
h ttps://blockr.io/documentation/api

No leads from Snowden's hash (it's not a Bitcoin Transaction ID, I don't think... not long enough?).

This is the best way to persist information that is small though (keys). Just praying that Assange had thought to do it.

Anonymous 10/25/2016 (Tue) 08:38:12 [Preview] No. 20524 [X] del

>>20523
Look into how this user found transactions based on Snowden's hash h ttps://ww
w.reddit.com/r/Bitcoin/comments/4wxyhj/snowden_tweets_private_key_hash_then_deletes_it/

I just finished a script that will try all the passes you posted today. I'll let it run overnight and will let you know of the results.

Anonymous 10/25/2016 (Tue) 08:51:10 [Preview] No. 20525 [X] del

The insurance file was apparently posted and then deleted on these two threads:

h ttps://web.archive.org/web/20161019170505/h ttps://8ch.net/pol/res/7881571.html
h ttps://8ch.net/pol/res/7962287.html

Does someone know of another way to find snapshots/cache of the older posts?

Anonymous 10/25/2016 (Tue) 09:05:33 Id: e73b0c [Preview] No. 20526 [Hide User Posts] [X] del

/7962287
h ttps://archive.fo/K2oGX
/7881571.html
h ttps://archive.fo/jBS6q
h ttps://archive.fo/vr16Q
h ttps://archive.fo/koTtO

Something must have been up with archive before because somehow these popped up and I'm pretty sure I searched those before.

Anonymous 10/25/2016 (Tue) 09:28:52 Id: e73b0c [Preview] No. 20527 [Hide User Posts] [X] del

Probably bullshit but just in case it isn't h ttps://archive.fo/0YMBk funny that it got bumplocked right away

Anonymous 10/25/2016 (Tue) 09:30:41 [Preview] No. 20528 [X] del

I made the script. If someone sends me candidate files I can compiled them all and leave it running.

This is the transaction:

h ttps://blockchain.info/tx/691dd277dc0e90a462a3d652a1171686de49cf19067cd33c7df0392833fb986a?show_adv=true

Can someone try to download it and see if they can get the message out of it?

Anonymous 10/26/2016 (Wed) 00:02:48 Id: 5914b4 [Preview] No. 20594 [Hide User Posts] [X] del   >>20597

also.. there are a lot of unspent outputs on the 10-17. Could there be something there?

Anonymous 10/26/2016 (Wed) 00:11:08 [Preview] No. 20596 [X] del

John Kerry hash creates a real bitcoin address when used as a private key:

4bb96075acadc3d80b5ac872874c3037a386f4f595fe99e687439aabd0219809

h ttps://twitter.com/wikileaks/status/787777344740163584?ref_src=twsrc%5Etfw

1D7f2VtZz7HHmdhpgn82nDhfu1b3PN5TaU

h ttps://blockchain.info/address/1D7f2VtZz7HHmdhpgn82nDhfu1b3PN5TaU

□ **Anonymous** 10/26/2016 (Wed) 00:11:56 [Preview] No. 20597 [X] del

>>20594
Definitely. We need to use the cablegate example as a test, as soon as we are able to get the message out of it, then we should start doing it on the new transactions.

□ **Anonymous** 10/26/2016 (Wed) 00:37:49 [Preview] No. 20601 [X] del

Posting some info on how to get bitcoin addresses from hashes.

Example, Snowden's tweeted hash:

ffdae96f8dd292374a966ec8b57d9cc680ce1d23cb7072c522efe32a1a7e34b0

To get two addresses out of it, you do (in Python):

from pybitcoin import BitcoinPrivateKey
pk = BitcoinPrivateKey('ffdae96f8dd292374a966ec8b57d9cc680ce1d23cb7072c522efe32a1a7e34b0', compressed=True)

pk = BitcoinPrivateKey('ffdae96f8dd292374a966ec8b57d9cc680ce1d23cb7072c522efe32a1a7e34b0')
pk.public_key().address()

And you get: 1EnDZkT8Thep9sfbAy5gwg23EHhZw7tYwg

Then you can find the address here: h ttps://blockchain.info/address/1EnDZkT8Thep9sfbAy5gwg23EHhZw7tYwg

The second address comes by using the compressed option:

pk = BitcoinPrivateKey('ffdae96f8dd292374a966ec8b57d9cc680ce1d23cb7072c522efe32a1a7e34b0', compressed=True)
pk.public_key().address()

1L3Zqv68zsXxNs53r25dKcUgjDe1119Rhj

Which is: h ttps://blockchain.info/address/1L3Zqv68zsXxNs53r25dKcUgjDe1119Rhj

The same can be done with all the Wikileaks hashes. So far, they don't seem to have transactions.

Working now on trying to download transaction information and get messages out.

□ **Anonymous** 10/26/2016 (Wed) 01:21:35 [Preview] No. 20607 [X] del >>21077

Alright guys, finally figured it out. We might have to go into the bunker at this point.

Here's how to get the original cablegate hidden message:

Go here: h ttps://blockchain.info/tx/691dd277dc0e90a462a3d652a1171686de49cf19067cd33c7df0392833fb986a

Then, just copy paste the entire part of the 'Output Scripts'

f = open('outscripts.txt','r')
from binascii import unhexlify

for ff in f.readlines():
chunks = ff.split(' ')
for c in chunks[1:-3]:
unhexlify(c.encode('utf8'))

This is the output:

"sSEXWikileaks Cablegate Backup

cablegate-201012041811.7z

Do
wnload the following transactions with Satoshi Nakamoto's downloa
d tool which
can be found in transaction 6c53cd987119ef797d5adccd
76241247988a0a5ef783572a9972e7371c5fb0cc

Free speech and free en
terprise! Thank you Satoshi!

□ **Anonymous** 10/26/2016 (Wed) 01:35:44 Id: 2e3d06 [Preview] No. 20609 [Hide User Posts] [X] del >>20611 >>21077

This is fucking excellent.

You have no idea how much I fucking love you guys.

Are we certain they're using the Bitcoin Blockchain (i.e. the hashes INTENTIONALLY link to transactions)? Or could these just be coincidental resolves?

Is it worth mentioning this on /r/bitcoin to encourage further investigation?

The pros of this is that it implicates anyone using Bitcoin.

The excuse of "it doesn't effect me personally" would no longer stand. And an industry worth almost $10B isn't going to fold easily.

Anonymous 10/26/2016 (Wed) 01:40:45 [Preview] No. 20610 [X] del

Lord Almighty, did we "cracked the code"?

Anonymous 10/26/2016 (Wed) 01:44:11 [Preview] No. 20611 [X] del >>20614 >>21077

>>20609
No. We can't tell anyone. We have to be discrete because we want to make sure the information is not deleted. We have to check ourselves first and there are plenty of leads right now.

Come on everyone. Don't let them intimidate you. We are in this situation because too many people refuse to take action. I will not allow these people to scare me into stopping. We are almost there. There is no one else that can do this. Every single leaker has traded in their life so that the public can know the truth. The least we can do is try to find their final messages. It might save their lives. It might stop something horrible from taking place.

Think about how the internet has changed. There is a paid army of users that have completely censored and destroyed our ability to communicate. CTR will not stop if we sit idly and let them conquer the entire internet.

Better code

```
f = open('unchecked.txt','r')

from binascii import unhexlify

data = b"

for ff in f.readlines():

chunks = ff.split(' ')

for c in chunks:

if 'O' not in c and '\n' not in c:

data += unhexlify(c.encode('utf8'))

print data
```

Example:

h ttps://blockchain.info/tx/3a1c1cc760bffad4041cbfde56fbb5e29ea58fda416e9f4c4615becd65576fe7

Post a summary of what you've got so far? Or add me to the tox group

Anonymous 10/26/2016 (Wed) 11:28:35 [Preview] No. 20688 [X] del

This transaction has a 7zip file in it.

h ttps://blockchain.info/tx/5c593b7b71063a01f4128c98e36fb407b00a87454e67b39ad5f8820ebc1b2ad5

file -b returns
7-zip archive data, version 0.3

It can't be opended for some reason. Maybe we can fix it with a hex editor. Maybe we have to combine a few transactions.

Anonymous 10/26/2016 (Wed) 12:24:36 Id: 87951e [Preview] No. 20689 [Hide User Posts] [X] del >>20690

Nobody is talking about this yet. Somebody get the word out! God speed you glorious faggots!

Anonymous 10/26/2016 (Wed) 12:53:07 [Preview] No. 20690 [X] del

>>20689
PLEASE DO NOT PUT THE WORD OUT YET!

There's probably a reason this isn't spoken about and putting this out prematurely could endanger Assange greatly.

WikiLeaks are probably using this as a bargaining chip.

Anonymous 10/26/2016 (Wed) 12:55:33 Id: d17f6a [Preview] No. 20691 [Hide User Posts] [X] del >>20711 >>20731

All you fuckers coming in here

DO NOT LINK TO THIS THREAD ANYWHERE!

we are actually getting shit done. We don't need a bunch of lurkers and needless bumps.

OpSec

Pic related was deleted pretty fast so I saved it just in case. Sorry if it's nothing but an anchor would have sufficed and the deletion made me suspicious. I posted the pic in a Kim thread and someone replied
>>uploaded on 10/20/2016 by a notorious scammer 'Streetprophet'
I don't know who or what that means.

>>20691
Yes, this was linked a few times on 8ch already. Please don't do that people.

>>20655
The alphabets are not one person and there might be a few good guys but the safest stance is to assume they're not on our side. Info is coming out now in the Oregon trial re: Bundy/Malheur Wildlife and there was a shit ton of FBI there, so far 22. One was holed up in the cabin with them under a fake name, handing out guns and running the firing range. He's Swiss and his fake name was Killmen. The same guy in charge at Waco was involved in Oregon. The guy driving the truck when Lavoy Finicum was murdered was FBI. Oregon Live has the details. Let's hope there are a few rogue honest alphabets but the majority are dirty fuckers.

the anon clarified who "streetprohpet" is in the other thread
>All of the past fake leaks that have been pushed here and on twitter have originated from this faggot named 'Streetprophet'. All claim to either be the missing emails or some damning evidence of pics and video. If you do some more digging he's just some anonymous faggot that's likely schizophrenic. Though he could be trying to infect anons' computers as well. Just be cautious when you see the uploader name or any username related to that.

Guys, sage this thread from now on and I'll bump a few other threads in the catalog. Just so this one doesn't look too active.

I suspect that these are codes of some sort. For instance, "sin topper" could refer to the first local maximum of sin(x), which occurs at x = pi/2. So the idea could be to take the first N bits of the binary expansion of pi/2, and then somehow combine that with the string "D6C4C5CC97F9CB8849D9914E516F9." Note that the binary expansion of pi/2 is identical to the binary expansion of pi, just bitshifted to the right by 1 place. I don't know if anyone here has tried this.

Where are the truly savvy crypto people talking about this? Tox?

WHY ARE WE IN THE BUNKER?

Anonymous 10/27/2016 (Thu) 13:10:48 Id: 7453cc [Preview] No. 20786 [Hide User Posts] [X] del

Some have gone to the buncker but as the veracity of the person requesting has not been established it is a matter of personal taste if you wish to go.

As for JA welfare no one can tell. It is strange that the BBC can not send someone up the street to check on his welfare. I conclude either he is dead and they will keep it silent until after the election or he is alive and they have been told not to report on it until after the election.

The radio could easily be faked but the transcript of the show appears to make sense and I am hopeful it is genuine.

However none of us are skilled enough to make a proper judgement so we will have to wait it out.

I think we also have to start thinking of strategy for when Hillary Wins. Apathy after the event will be our biggest weakness and she will be shutting things down quickly.

Anonymous 10/27/2016 (Thu) 14:47:38 Id: 508f85 [Preview] No. 20793 [Hide User Posts] [X] del >>20802 >>20809 >>20871

Assange was captured. They want to keep it out of media. So that it does not threaten hillary campaign.

Assange was going to kill himself if they removed him from embassy by force. Rather than be torured for life in the United States. Assange was drugges by his guest before being removed a few hours later.

There are pictures of a man being removed from the embassy with a gitmo bag over his head.

The equador government was threatened with assassination and then with trade sanctions and they caved.

The US govt does not understand the assange key drop mechanism. They were talking about replacing him with body double, to cause double about whether Ether he was captured.

The wikileaks reddit has been seizes. Links to wikileaks are on sitewide reddit spam list now. Archieve.is was redirected to new site. 8chan and 4chan are under enemy control. There were several DNS domain seizures and IP address hijacking attacks at network backbone level.

I only know fragments of what happened. They have system for real time website interception and real time modification of content of pages and social media. This has been deployed.

The existing internet is completely compromised.

Some of the attacks are wide targeted like DNS. Other attacks are to shut down individual users.
Some of the attacks are deployed at the cable modem level. Inside of cable modem firmware. Some of them are crude like dropping DNS packets. Others are cable modem level redirection of specific IP address for a single server to another IP, to enable man in the middle attacks.

This is a military level cyberwar being conducted by group controlling the infrastructure on the home turf.

Anonymous 10/27/2016 (Thu) 14:51:28 Id: 508f85 [Preview] No. 20794 [Hide User Posts] [X] del

The clinton campaign believes that the key drop will be delayed as long as people believe assange is still alive.

They are usng uncertainty to create confusion and create delays for tactical reasons.

Several alt media people have been kidnapped and black vanned. Information about it is being censored from social media.

Very dark times. Do not rely on social media and expect coordinated disinformation campaign to make reality unknowable and create uncertainty.

Anonymous 10/27/2016 (Thu) 15:07:31 Id: 6fda83 [Preview] No. 20796 [Hide User Posts] [X] del

Archive.is doesn't direct anywhere except archive.is for me, so I don't know what you guys are talking about there.

(2.38 MB 3968x2976 P6150004.JPG)

The two over paranoid writers above have zero information.

There are people all over making it difficult to communicate but not at secret service or military level.

4chan and others appear to be behaving differently. Wikileaks twitter page is definitely not performing as normal.

However life moves on for normal for most of us and very few of us have anything to worry about.
I see no police man outside my house and I live in Japan. A country they can keep you detained for a month with no contact with the outside world just for fighting in a bar.

I am suspicious of what has happened to JA and if I was in London I would be knocking on the door of the Embassy and seeing how the staff re-act. You are not breaking any laws by asking about his welfare. Don`t film, don`t record and act like a sensible person and they will not do anything.

I would advise anyone who does this to respect the staff of the Embassy as they have been very good to all of us by keeping him safe for so long. Be polite and do not cause them any problems. If you think they are getting stressed then walk away and leave them be.

The messages above are pointless. As I said before what people need to think about is what happens if Hillary wins.

I think for all of us it should be a concerted effort to end this siege of JA and allow him some freedom. Allow him to live a normal life as he has done enough for the freedom of speech and it is time for him to retire and leave up to the younger generations.

Its not paranoid. It is reality. That is what happened.

Why would criminals leave evidence or give you the information required to form an unambiguous picture of reality.

Study disinformation and counter intelligence operations and phychological operations. Secrecy is a weapon and is used in very specific ways for very specific reasons.

Some people cannot talk because they are under threat. They wont compromise their safety and there is no longer any uncensored channel for communication. Any informatiom is taken down or muddied with doubt and strategic uncertainty.

There were hundreds of people in embassy live streaming on twitter after internet was cut. It only takes five minutes for any of them to verify Assanges status. Yet verification was denied.

Assange has fiber optic ground line as well as 3G and shortwave communications.

Go ask the wikileaks people directly. People are too lazy and stupid to get primarily source material.

The wikileaks twitter after being taken over released a cut video that was four years old, to "prove" Assange was still alive. They did a hasty and poorly executed disinformation operation after Assange was captured, to delay the dead drop.

They would also use SIGINT and bribery and threats. To identify and rapidly capture or eliminate the key holders. To prevent required number of key holders from publishing the key parts.

Assange was not the only one whose internet was cut. This was a well orchestrated international operation. Internet was cut to over twelve wikileaks associated people. They presumably have been captured also.

Why is everyone focused on Assange and has not contacted the parents and spouses of the wikileaks members whose communications were cut.

Enumerate all possibilities. Evaluate all evidence. Weigh the evidence for each state of reality. Contradictions do not exist in reality.

If you think that would be her response to this then you know less than zero about that woman. Considering she hasn't spoken out extremely loudly and on every available platform like she has a long history of doing then I'll assume she's on a gag order too. And silence on her part after a direct question about the well-being of her son would prove that. Unless your kike buddies got her too. KYS

>>20822

The phone calls were not legit.

People inside Clinton campaign said they would kidnap him and replace him by a body double.

There is voice morphing software developed by military that is almost perfect. It does not prove anything.

Without iris biometrics and finger prints and DNA test, there is not way to confirm.

This is just dirty tricks.

Contact the wikileaks administrators and people behind the curtain. Contact their parents and friends. Verify if they are captured.

Admins note the paranoia experts details and keep them for after the election.

In the good old days you would already be receiving pizza. Wait for the 9nth as you won`t bee wanting to open you door or mouth from then on.

>>20834
yeah send a pizza to people trying to stop a 20 year old war and making the truth public instead of to the CTR shills that are censoring the internet and making every place online a giant clusterfuck. bet it makes you feel like youre really cool and badass. you wanna be a badass? send a fucking pizza to the state department or john kerry, tell him its from russia. youll be crying inside a blackbag in no time. so why dont you just shut the fuck up now. you cant make fun of people on the internet in a torture basement.

>>20834
WTF?!? Threats now?

And here I was just about to ask a rhetorical question of if the other anon was an alphabet. But you can't be that stupid to threaten while a board is being monitored can you?

>the shitposting is good

Anonymous 10/28/2016 (Fri) 03:47:33 Id: 7453cc [Preview] No. 20839 [Hide User Posts] [X] del >>21077

I have lived a long enough and fruitful life. Black bag me if you wish. I am not at all worried about vangelist talk.

The last time I ever got proper worried was on the outskirts of shanghai when a business meeting went sour and I had to be driven back separately to my bosses. Being taken in a car surrounded by people you don`t know, in a place with no real inhabitants is scary.

The shitposting above is why Hillary will win and you lots of kindergarten cops will go back to school and pledge allegiance to your Union Jack.

I think maybe your needed back a 4cheese with the rest of the ineffectuals.

I will not be pursuing this any further.

If anyone wants this investigation to continue, they will have to do it themselves or involve others. KimDotCom would be a good person to inform. He has contacts and would likely know if releasing this information would jeopardize Assange or WikiLeaks safety. In the event it doesn't, he is loud.

Alphabets, you should defect or subvert from within. What you are doing is treasonous and a betrayal of your people.

Anonymous 10/28/2016 (Fri) 07:39:57 Id: 7453cc [Preview] No. 20863 [Hide User Posts] [X] del

As I come from the St Max side of the political arena and because I am over 40 I prefer not to direct people in one way or another.

I would suggest that firstly no one should focus to heavily on the election day. This is a way of rushing people into making mistakes. It is not an important date:

1. Trump wins: Anything found after that will help him secure his presidency.
2. Hillary wins: Anything found after that will undermine her presidency.

So work slowly and carefully and focus on a good result rather than a quick fix. We have seen the media do not like to publish anything against their agenda so information distribution is actually more important.

I would suggest everyone to face to face contact with friends they can trust. Pass on information via face to face in a long chain. A slower process but a more secure one than online.

Those who are happy to publish should publish openly. Why hide.

If you have done something worth hiding about then pass on and let someone else publish.

It wont be the big mouth loud fags that will fight. It will be the general everyday people. The BMF`s will run and hide as that is what they are good at.

NSA AND FBI WE NEED YOUR HELP

EVERYONE IS COMPROMISED, THERE IS NO ONE LEFT TO FINISH THIS

PUSH THE PROGRESS INTO THE BLOCKCHAIN

Anonymous 10/28/2016 (Fri) 07:46:12 [Preview] No. 20865 [X] del >>20871

SAVE ALL THE THREADS

EVERYTHING IS ABOUT TO GET DELETED AND/OR MODIFIED TO HIDE THE PROGRESS

Anonymous 10/28/2016 (Fri) 07:47:02 Id: f958ff [Preview] No. 20866 [Hide User Posts] [X] del >>20892

IF YOU ARE READING THIS DOWNLOAD ALL INSURANCE FILES AND THE ENTIRE BLOCKCHAIN INTO AN EXTERNAL DRIVE RIGHT NOW

IF YOU KNOW HOW PUSH THIS INTO THE BLOCKCHAIN ALONG WITH THE INSURACE FILES

```
import sys
import pycurl
import struct
from binascii import unhexlify, crc32
import urllib2

transaction = str(sys.argv[1])
data = urllib2.urlopen("h ttps://blockchain.info/tx/"+transaction+"?show_adv=true")

dataout = b''
atoutput = False
for line in data:
if 'Output Scripts' in line:
atoutput = True
if '</table>' in line:
atoutput = False
if atoutput:
if len(line) > 100:
chunks = line.split(' ')
for c in chunks:
if 'O' not in c and '\n' not in c and '>' not in c and '<' not in c:
dataout += unhexlify(c.encode('utf8'))

length = struct.unpack('<L', dataout[0:4])[0]
checksum = struct.unpack('<L', dataout[4:8])[0]
dataout = dataout[8:8+length]
print dataout
```

usage

python script.py transaction_number

returns all the data in the output scripts

example

python script 691dd277dc0e90a462a3d652a1171686de49cf19067cd33c7df0392833fb986a

Returns,

Wikileaks Cablegate Backup

cablegate-201012041811.7z

Download the following transactions with Satoshi Nakamoto's download tool which
can be found in transaction 6c53cd987119ef797d5adccd76241247988a0a5ef783572a9972e7371c5fb0cc

Free speech and free enterprise! Thank you Satoshi!

HOW TO FIND MESSAGES ON THE BLOCKCHAIN

I'll be helping you with a few initial examples. Remember that if you feel like you've been compromised, switch over to codec communication.

I'm assuming you already did the example on Jean's latest code dump >>24140 Let's try to do a few more.

First, let us download a transaction that generates a file. A nice example is the original Bitcoin paper. It can be found in transaction 54e48e5f5c656b26c3bca14a8c95aa583d07ebe84dde3b7dd4a78f4e4186e713.

Use Jean's script and do

'python script.py 54e48e5f5c656b26c3bca14a8c95aa583d07ebe84dde3b7dd4a78f4e4186e713 > paper.pdf'

Once it is done you will be able to see a pdf was generated in that directory.

Note that the transaction that generates the Bitcoin paper is related to the transaction that describes the Wikileaks cable dump, the cable dump itself, and many other transactions that have other content. Some has yet to be completely decrypted. These transactions are all related because they have common addresses involved or the money resulting from the transaction was used.

involved or the money resulting from the transaction was used.

For example, take a look at this transaction: h ttps://blockchain.info/tx/08654f9dc9d673b3527b48ad06ab1b199ad47b61fd54033af30c2ee975c588bd

If you do

python script.py 08654f9dc9d673b3527b48ad06ab1b199ad47b61fd54033af30c2ee975c588bd

You will get a key that was leaked.

Now, if you look at the addresses involved, you can see one at the bottom, below Wikileaks. It does not show 'Escrow'. Go to that address and see its transactions. You will then find another message. Keep doing this and you'll eventually find the cable dump again.

Using this method we've found several transactions that involve Wikileaks that we don't quite understand.

One good strategy is to generate a file from a transaction and then look at its 'magic numbers' to figure out what it could be.

For example, the Bitcoin paper transaction.

If you do

'python script.py 54e48e5f5c656b26c3bca14a8c95aa583d07ebe84dde3b7dd4a78f4e4186e713 > output'

and then do,

'file -b output'

You will get:

'PDF document, version 1.4'

For

'python script.py 7379ab5047b143c0b6cfe5d8d79ad240b4b4f8cced55aa26f86d1d3d370c0d4c > output'

'file -b output'

you should get

'GPG encrypted data'

MERGING CODE TO GET FILES FROM MULTIPLE TRANSACTIONS

```
import sys
import pycurl
import struct
from binascii import unhexlify, crc32
import urllib2

# usage, python script.py transactionlist.txt > file

txlist = str(sys.argv[1])

def txdecode(transaction):
data = urllib2.urlopen("h ttps://blockchain.info/tx/"+transaction+"?show_adv=true")

dataout = b''
atoutput = False
for line in data:
if 'Output Scripts' in line:
atoutput = True
if '</table>' in line:
atoutput = False
if atoutput:
if len(line) > 100:
chunks = line.split(' ')
for c in chunks:
if 'O' not in c and '\n' not in c and '>' not in c and '<' not in c:
dataout += unhexlify(c.encode('utf8'))

length = struct.unpack('<L', dataout[0:4])[0]
checksum = struct.unpack('<L', dataout[4:8])[0]
dataout = dataout[8:8+length]
return dataout

f = open(txlist, 'r')

alldata = b''
for l in f.readlines():
l = l.rstrip('\n')
alldata += txdecode(str(l))

print alldata
```

example:

python script.py 691dd277dc0e90a462a3d652a1171686de49cf19067cd33c7df0392833fb986a

save the 130 transactions to trans.txt

then use the script above and do

python newscript.py trans.txt > cables

you will get a zipfile with the cables

GETTING ADDRESSES FROM HASHES

```
# How to get address from hash
# Run the following on bitcoin
from pybitcoin import BitcoinPrivateKey
pk = BitcoinPrivateKey('HASHGOESHERE', compressed=True)
pk.public_key().address()
# Compressed address will be returned
pk = BitcoinPrivateKey('HASHGOESHERE', compressed=False)
pk.public_key().address()
# Uncompressed address will be returned
```

post photo of man leaving embassy with gitmo bag over his head or it didn't happen. links to wikileaks are also not banned sitewide on reddit, loser

>>20827
you obviously have no idea how bitcoin works, they can't "change the blocks"

>>20865
oh stfu there is no progress you guys just started learning how to use the blockchain, you haven't discovered anything new

you guys will get nowhere because the key is not released yet. on nov 8 his internet will be restored.

Anonymous 10/28/2016 (Fri) 08:36:35 [Preview] No. 20872 [X] del

whoever gets the keys first, unlock the files and immediately push the entire content into the blockchain. there will push a lot of garbage to confuse people. there will a lot of posts with fake keys everywhere. the only way to do this is to push the decrypted files directly in there in the same way the cables were posted.

they are already here. there are many factions. not everyone is against you. a lot of people want to help you. they want the public to do this. dont give up. trust your gut.

Anonymous 10/28/2016 (Fri) 10:19:50 [Preview] No. 20874 [X] del

>>20871

This is disinformation shill. Lots of name calling, hostility and "do nothing".

When people give you information whose purpose is to get you to "do nothing", it is shilling. "Someone else will do that for you. Everything is ok".

People are being picked up in vans and disappeared, for posting content on 4chan/8chan, that is making it into the media and impacting the Hillary campaign.

Her internal people are completely demoralized by the leaks. They are taking severe measures to get rid of the people influencing public opinion against Hillary.

The FBI and CIA have orders under Operation Mockingbird to take out the alternative media. They were going to do a full purge, within first month of Hillary presidency to consolidate control. They are working overtime right now and the time-line is accelerated.

We are in a war. This is a war.

The enemy wants you to do nothing and just wait. Instead of analyzing all evidence, digging and determining what is true and what is possibility.

The enemy will discredit anyone who suggests a version of reality that contradicts the version they are trying to promote. They will even create false evidence and use disinformation.

The US govt literally sends out vans to kidnap 12 year olds for shit posting on 4chan.

That is how they stopped the anon operations. Anon almost took out the US govt. There was a huge panic and they were hacking all the email servers and spearfishing high level people.

But ignore it. They do not have enough vans. They are out of vans. They are fighting against 15 million people. Its so futile.

Unless new information is posted my personal opinion is that JA is still alive at the Embassy.

The three coded tweets are more likely to do with a request to attend the funeral than anything else. That being the case the dead man switch has yet to be used.

I also think the radio call in was genuine. If so the important message was that they have about 50,000 emails being released by an algorithm. We are up to 35,000 and with a drip feed of just over a thousand a day I think it will done done just in time for the election.

If trump wins then it is likely that the JA situation will be resolved quite quickly. If Hillary wins then we all need to do are best to resolve it for her.

Personally I think she will win and be dead within the 1st year of office. Wishful thinking I know.

Why doesn't JA sign something with his PGP key if he's still alive?

Anonymous 10/29/2016 (Sat) 09:49:35 Id: 68f16b [Preview] No. 20960 [Hide User Posts] [X] del

>>20897

>Unless new information is posted my personal opinion is that JA is still alive at the Embassy.

We dont need "opinions". If he was still at the embassy, one of several thousand people would just go to the embassy and then go out and say "He is still alive, I saw him yesterday".

He has been removed from the embassy. With a gitmo bag over his head. Remember the CIA extraordinary rendition flight that shut down the London airport.

They will not release information about it, until after the election, because it has the potential to cause protests of hundreds of thousands of people if it gets into the media.

The wikileak staff is also MIA. All twelve staff members are radio silent and have not been heard from.

Contact the wikileaks staff, stop focusing on Assange.

If someone appears in the embassy who says they are Assange, get their iris and finger print biometrics to verify its not a body double. They said they may use a body double.

In my opinion, the Snowden addresses and transactions are false leads.

A Bitcoin Private Key can be generated from any hash of the right length. And there's no reason to give out the Private Key over the Public Key (checking one of the addresses BTC was sent to from this gives a "scam" account that claims to double your Bitcoin... do a Google search on it and you'll find a corresponding pastebin for it.).

Also, the transactions that give the Database File headers are most likely false positives imo. They're not big enough to truly contain any DB data.

However, if the DMS did trigger, I do feel confident it'll be in the blockchain.

If anyone has a full INDEXED node (txindex=1 in bitcoin.conf), the following script might be useful:
h ttps://paste.ofcode.org/BGbWMQyfxG44xNujEbV5Pb

Run it with the following command to search blocks after Oct 15th (up until Nov 3rd):
python ./block-data-finder.py blocks 434362 437105

Notes:
A folder called "data" will need to be created prior to running.
You must change the rpcuser and rpcpass in the script (near the top).
You MUST be running a full node with txindex=1 in bitcoin.conf

Hope this helps.

>>21163
the cables dump by wikileaks was also small, you have to combine files to get it

what are the odds that the addresses that come out of the hash are used the same day the hash was posted and also on sept 15 when snowden was tweeting about a pardon

> The owner of paste.ofcode.org has configured their website improperly.

no ones clicking that shit shill

Anonymous 11/03/2016 (Thu) 03:48:07 [Preview] No. 21180 [X] del >>21205

>>21179
Incredibly likely. This is a hash turned into a Private Key (you can do this with ANY hash of the correct size).

A Private Key gives the user ownership of a particular account (in this case, many users now "own" this account).

Scammer tactic:
>Snowden releases hash.
>/r/Bitcoin realize hash can be turned into Private Key.
>Scammer deposits BTC into this account.
>Scammer then sends BTC from that account into this account hoping to con coins out of people who stumble upon that link (scam publicity).

Do a Google Search for this receiving Address: 1aa5cmqmvQq8YQTEqcTmW7dfBNuFwgdCD
You'll find a few hits for "Bitcoin Doubler" (SCAM).

Again, there's absolutely no reason to post a Private Key. Once this "Private Key" (which is just a hash with the correct number of bytes) is public, anyone can do anything they like with it. It is more likely that others made the transactions, not Snowden (there are no transactions prior to this Hash, turned Private Key, going public).

In regards to the Database files:
1. Each transaction is tiny (not nearly enough for a database)
2. The format is DBase3 (Microsoft). Why would Snowden be using a Microsoft database?

>h ttps://paste.ofcode.org/BGbWMQyfxG44xNujEbV5Pb
That's interesting. Cert was definitely valid when I made that post.

Here's another:
h ttps://codepaste.net/inhg6t
If the cert becomes invalid for that too...

>>21218
Scraping yesterday, I found a few GPG Sub-Keys around blocks 383000 to 383100.

There IS plenty of deliberately placed data in the blockchain, but the DBase3 stuff is just non-sense, a false-positive (look at how many records are allegedly contained in such small transaction sizes. You'd need several hundred MB's worth committed to the chain for a DB that size).

I won't say for certain that those transactions don't mean anything, but considering Snowden's was a hash turned Private Key (not Public Key), I doubt they do. Anyone could've made those transactions.

>>21205
Would love to see those onion threads you mention. I cannot find anything about it in "Outer Heaven".

Has anyone explored the Litecoin Blockchain yet? Blockchains really are the best way to have small information persist forever and I have few doubts that, if the DMS did trigger, this is how the keys would be distributed as a fail-safe to censorship.

From that PDF:
>The attacker has control of the hidden firewall, it is easy for the attacker to
>simply block traffic based on specific ports or based on destination address or
>network route, for example, the government can block port 8333 at source
>and therefore block all Bitcoin transactions.
>A coordinated attack on the Bitcoin network is possible by blocking ports of
>Minors around the world. Reducing the hash rate and blocking transactions.

Around the same time as the DDOS attacks, can anyone verify that Bitcoin maintained an average transaction rate (i.e. evidence that Bitcoin wasn't shutdown)? Anyone have the UTC time of the DDoS attacks?

I know the mempool was flooded a day or two afterwards (40000 transactions as opposed to the usual 4000 or so), but this could've been an attack to thwart and discourage adoption of Bitcoin 0.13.1 (SegWit) by those that don't support it. (The timing here is suspicious.)

>>21233
This is a good approach to take. Anyone got a script to check for NULL bytes or test compressed size vs decompressed size? These insurance files are likely compressed anyway, so after attempted decryption, a "file -b" should reveal sensible headers.

I will modify the script here:
>>21185
... to output transactions to a subfolder based on file type (detected with "file -b").
From this, we can run through a "AES-256" key folder and attempt the keys on each insurance file using a basic python script. After each attempted decrypt, the script can run "file -b" to check for potential success (if anyone wants to recommend another check to implement here too, I'm all ears.)

Godspeed Gentoomen. Hope to report back within 24hrs.

October 10 - evening - Suicide Watch/Solitary (when events below take place)
October 11 - morning - Suicide Watch/Solitary (when events below take place)
October 11 - Chelsea is placed into "Medical Observation" with Restrictions (Where she is currently.)

Note that Medical Observation, is where there are four single rooms with a common area that has a phone and television. **She is not being allowed to send or receive mail. (Yes, even privileged mail.)**

Statement from Chelsea:

In the days up to Monday 10 October 2016, several inmates in the special housing area where I was at, in Alpha Tier, as it's called, were moved out of Alpha Tier to somewhere else. No explanation was provided. After dinner, but before sunset, two tier guards (and I their specific names on paper) discussed: (a) a cyber attack on the east coast, affecting phone lines and killing dozens of people. (b) Twitter mentioning me being "blown up." (c) Congress entering an emergency session to pass new anti-terrorism measures (d) a proposed amendment to the constitution, the 28th Amendment, that would bar convicted felons from holding office. (e) emergency orders from the "fucking president" affecting USDB and its operations.

At shift change on the evening of 10 October 2016 there was a commotion throughout SHU East:
a. There was woman yelling "Gooooo Chelsea."
b. The guards on the tier were activating their PALS alarm system, which is a panic button system that alerts the whole facility to an emergency. However, it was authenticated without the Watch Commander and the all PAL alarms that went off were deactivated rapidly.
c. I also heard the booth and tier guards asking "who are you?" and a male voice explaining "Oh, I'm new here."
d. Then there was physical fighting.
e. There were also several reports of suppressed or silenced shots from a pistol that was either silenced or suppressed by some means.

>>21282
posting EVP_BytesToKey just in case it gets cleansed from the internet and archives

NAME

EVP_BytesToKey - password based encryption routine

SYNOPSIS

#include <openssl/evp.h>

int EVP_BytesToKey(const EVP_CIPHER *type,const EVP_MD *md,
const unsigned char *salt,
const unsigned char *data, int datal, int count,
unsigned char *key,unsigned char *iv);

DESCRIPTION

EVP_BytesToKey() derives a key and IV from various parameters. type is the cipher to derive the key and IV for. md is the message digest to use. The salt paramter is used as a salt in the derivation: it should point to an 8 byte buffer or NULL if no salt is used. data is a buffer containing datal bytes which is used to derive the keying data. count is the iteration count to use. The derived key and IV will be written to key and iv respectively.

NOTES

A typical application of this function is to derive keying material for an encryption algorithm from a password in the data parameter.

Increasing the count parameter slows down the algorithm which makes it harder for an attacker to peform a brute force attack using a large number of candidate passwords.

If the total key and IV length is less than the digest length and MD5 is used then the derivation algorithm is compatible with PKCS#5 v1.5 otherwise a non standard extension is used to derive the extra data.

Newer applications should use more standard algorithms such as PKCS#5 v2.0 for key derivation.

KEY DERIVATION ALGORITHM

The key and IV is derived by concatenating D_1, D_2, etc until enough data is available for the key and IV. D_i is defined as:

$D\_i = HASH^{count}(D\_{(i-1)} || data || salt)$

where || denotes concatentaion, D_0 is empty, HASH is the digest algorithm in use, HASH^1(data) is simply HASH(data), HASH^2(data) is HASH(HASH(data)) and so on.

The initial bytes are used for the key and the subsequent bytes for the IV.

RETURN VALUES

EVP_BytesToKey() returns the size of the derived key in bytes, or 0 on error.

We can easily implement this with python code. or we could even possibly find it already in the open source implementation.

I will try to implement this tomorrow or to find it in the code.

I will tell you a secret.

To decrypt the insurance file. Make sure to archive this before it disappears.

The EVP_BytesToKey key derivative algorithm uses md5. It is trivial to break the key for the first block.

>>21341
22 August (2:47 AM): Attempted break-in at Assange's embassy home; Ecuador questions London's 'inadequate response'

7 October: Podesta mails leaks first batch

12 October: Wikileaks announces: now publishing on a schedule created by our new impact maximizing publishing algorithm the "Stochastic Terminator"

12 October: Mike Cernovich tweets about getting info that 33K deleted emails exist

15 october (morning): WikiLeaks releases Hillary Clinton's Goldman Sachs transcripts.

15 october (Lunch): Pamela Anderson visits Assange

15 october: Cut off Assange's internet access 5:00 pm GMT

15/16 october (dawn): Wikileaks DNS Server was suddenly pointed elsewhere (not confirmed)

16 october (between 11:00pm /11:30 pm GMT):
Wikileaks releases 3 □pre-commitments (1: Kerry; 2: Ecuador; 3: UK FCO)

17 October (6:33 am GMT): "Wikileaks announces the Julian Assange's internet link has been intentionally severed by a state party" and that "We have activated the appropriate contingency plans".

17 october (8:27 pm GMT): on a second tweet (almost 14 hours later) announces that "We can confirm Ecuador cut off Assange's internet access Saturday (15 october), 5pm GMT, shortly after publication of Clinton's Goldman Sachs speechs."

17 october: GUCCIFER_2 tweets: "i'm here and ready for new releases. already changed my location thanks @wikileaks for a good job!"
18 october: a script was activated that made file.wikileaks.org/file publicly visible and set all the file date and time stamps to 01/01/1984 18 october: Wikileaks announces that : "Multiple US sources tell us John Kerry asked Ecuador to stop Assange from publishing Clinton docs during FARC peace negotiations". (edited)
18 october: Wikileaks announces "The John Kerry private meeting with Ecuador was made on the sidelines of the negotiations which took place pricipally on Sep 26 in Colombia."
18 october: Wikileaks announces that "A front has released through US Democratic media an elaborate story accusing Julian Assange of paedophillia & taking US$1million from Russia" – publishes all docs about this case

>>21342
18 October: Ecuador admits to 'restricting' Assange communications over US election.

19 october: Craig Murray posts on his blog that "went to see Julian Assange for a whisky in the Ecuador Embassy" (….) "I left Julian after midnight. He is fit, well, sharp and in good spirits".

20 october: Cryptome tweets "Wrong building for Assange's EC bolt hole. Orator perch still waving flag. 51°29'56.62" N 0°09'40.51" W'

20 october: Wikileaks annouces "We have a suprise in store for @TimKaine and @DonnaBrazile."

20 and 21 october: Wikileaks tweets with many spelling mistakes – "HELP HIM' code.

21 October: Dyn DDoS cyberattack

21 October: Wikileaks tweets "Mr. Assange is still alive and WikiLeaks is still publishing. We ask supporters to stop taking down the US internet. You proved your point".
21 October: Wikileaks tweets: "The Obama administration should not have attempted to misuse its instruments of state to stop criticism of its ruling party candidate".

21 October: Wikilekas posts photo of "Armed policed outside Embassy"

22 October: Wikileaks announces Stochastic Terminator Algorithm update (no explanation)

22 October: Gavin MacFadyen death
23 October: Wikileaks tweets "A bloody year for WikiLeaks: Jones/Ratner/Gavin"
23 October: Tweet signed JA (honouring Gavin)
23 October: Wikileaks announces that "We will release a statement tomorrow about Assange. Our editor is safe and still in full command despite reduced communications with staff."

24 October: WikiLeaks publishes "Editorial Board statement on the status of Julian Assange, Ecuador and the US election"

24 October: Wikileaks publishes video Moore's video(from June)

24 October: Wikileaks annouces "poll": "Thousands keep demanding Assange proof of life. Not unreasonable. He's in a tough spot and is WikiLeaks best known validator. Preference?" – Video option won.
24 october: Wikileaks announces that "While in London for #SHOCircus, Mark Halperin attempts to interview #wikileaks' founder julian assange (Video with "Assange´s reply: "Everything" about what the MSM is missing about Podesta leaks).

24 october: Assange lawyer @BarnsGreg gives interview to "ABC Radio National2 (Australia)", and states that spoke with Assange "yesterday". (interview link not working anymore)

i think we could easily implement a sat solver

I will get government grant and we have computer cluster. The insurance files will be decrypted within five years in worse case.

There are also methods with genetic algorithms. The "Slow" way can take 2 years but can be decentralized and done in parallel. CUDA does not work well for this.

If there is known plaintext in the file or we know something about the format, then it is only human time to implement the ad-hoc stuff.

Anonymous 11/07/2016 (Mon) 09:14:46 Id: c2d6cf [Preview] No. 21408 [Hide User Posts] [X] del

>>21340

We have the insurance files. They are in the blockchain.

They tried to do an attack with EC2 and fill up connections to the ports for accepting new transactions, to slow down or stop the key broadcast. The attack failed and people noticed also.

The transactions have been broadcast and executed. The bitcoin transaction pool has filled.

However, they twelve wikileaks admins are kidnapped or gone. We do not know where they are. They have the information about how to combine the information to decrypt the files.

Assange was told he was going to be removed from the embassy. He threatened to kill himself if removed from the embassy. I am sure he triggered the drop.

Someone needs to create a website, where people can put in candidate keys and test decryption on a small block.

For browser to access endchan.
- use a vpn
- if you are inside of NATO, they have equipment to track the VPN end-to-end or even across multiple hops. This can be used to attack tor but is not that good.
- use a VPN. The inside of the VPN, run tor

Pale Moon is the best browser, for anti-finger printing. They will block you from accessing any website using cloudflare, until you switch to a browser/VPN that they can track or finger print you with.

>>21407
no need for five years.

>The process by which the password and salt are turned into the key and IV is not documented, but a look at the source code shows that it calls the OpenSSL-specific EVP_BytesToKey() function, which uses a custom key derivation function with some repeated hashing. This is a non-standard and not-well vetted construct (!) which relies on the MD5 hash function of dubious reputation (!!); that function can be changed on the command-line with the undocumented -md flag (!!!); the "iteration count" is set by the enc command to 1 and cannot be changed (!!!!). This means that the first 16 bytes of the key will be equal to MD5(password||salt), and that's it.

```c
int EVP_BytesToKey(const EVP_CIPHER *type, const EVP_MD *md,
const unsigned char *salt, const unsigned char *data,
int datal, int count, unsigned char *key,
unsigned char *iv)
{
EVP_MD_CTX c;
unsigned char md_buf[EVP_MAX_MD_SIZE];
int niv, nkey, addmd = 0;
unsigned int mds = 0, i;

NOT A DRILL, WIKILEAKS IS COMPROMISED THEY STOPPED EMAILS FROM GOING OUT

TWITTER
no one has answered since oct 16. the wikileaks chat is completely dead.
they just posted a video (read: NOT A RETWEET) posted by another person and accidentally put a link to the persons profile h
ttps://twitter.com/wikileaks/status/795706165971841024
seems like a random fan girl is running the account h ttps://twitter.com/m_cetera

PODESTA
podesta 33 started at 53000. podesta 32 ended at 52481. they skipped 518 that are online 52481-52999. emails 56253-57153 have been online for a while and theres no announcement. something has been extra sketchy since last nights ddos.

DNC
wikileaks still shows 27515 emails for the dnc but in reality there are 44052 (16537 emails are not indexed). the election is tomorrow...

>why those same files have invalid PGP signatures
This can also be easily verified by anyone using 'gpg'. This is the output:
gpg --verify 2016-11-07_WL-Insurance_EC.aes256 -> gpg: verify signatures failed: unexpected data
gpg --verify 2016-11-07_WL-Insurance_UK.aes256 -> gpg: verify signatures failed: unexpected data
gpg --verify 2016-11-07_WL-Insurance_US.aes256 -> gpg: verify signatures failed: unexpected data
The torrents themselves (the file you use to download these files) are not verified either. You can test this by using Verisign. This is the output:

don't get demoralized. they are going after his legacy now. it's very likely that he had a shady upbringing and he could have very well been a plant this entire time (even if he didn't know it). however, the important thing is that all leaks were real and that there is a lot of evidence showing that the leaks were not only stopped but that all these insurance files could potentially be unlocked by someone who could continue the work wikileaks started. its a race against time at this point. they are going to try to discredit wl. those latest files could be the first dump of disinfo. soon it will be impossible to tell what's real.

Check out ceo.xyz.

The ceo of the xyz domain is a kebab kid who deals directly with major kikes and is noted as the *youngest ICANN operator*.

Then there's this

>The most remarkable part of our unprecedented growth has been the advanced level of abuse mitigation to enforce XYZ's zero-tolerance abuse policy. In partnership with many of the industry leaders in the security sector, our Anti-Abuse Team is able to proactively monitor, detect in near-realtime, and suspend domains that are being used for spamming, phishing, malware, or other forms of abusive activities. The result is less than 1% abuse in the entire .xyz zone, and a lower abuse score than well-established domain extensions like .com, .net, .info, .biz, and .us, according to Spamhaus.

They say it's just about preventing spam but this feels like Cloudflare jewry. Correct me if I'm just being a paranoid idiot.

I know this doesn't mean Endchan is directly compromised but it's a potential weakess.

Depends on the contents. If it really will start a war, I don't think that's good for anyone, but if there is information that could potentially put away the criminals, we need to start cleaning this up. If it implicates the top of the government, then we need to start lower.

Think state government and 2nd amendment. A well regulated militia... National Guard is controlled by states and governors, not Federal government.

They are heavily armed and many have security clearances and contacts to make sure this information doesn't die.

Selectively leak the information to National Guard units who have strength in numbers and firepower to ensure the information doesn't die.

National Guard can also be Deputized in a state to perform state law enforcement if necessary. They are not subject to posse comitatus if not under federal control. If the federal government tried to control the national guard, the governor MUST consent and relinquish control.

Once we have the information, we use this channel to enforce the laws and take down the corruption.

This is true, but there's no guarantee that Assange ever took part in "The Family's" activities (him and his mother were on the run from them). His mother's ex-boyfriend at the time was the member.

They ran a Mental Institution in Kew, Melbourne, Australia, that used to dose patients with LSD. Had ASIO contacts and notable psychologists in their rank (national and international). Gave children members (usually blonde) LSD and locked them in basements as ritual.

The "mother" of the cult was Mary Anne Brynne (from memory). Most older members (as in, nursing homes) have a photo of her by their bed and always tend to remark "Isn't she beautiful!?" when someone asks about her.

She never saw jail and, though they're apparently non-operative anymore, I can guarantee you that this isn't quite true (same shit under a different name - i.e. rebranding after controversy).

As an interesting side-note, they even had a well-known Yogi join their cult.

Whether Assange was associated or not is irrelevant. Focus on what he has leaked and given us.

I don't want to detract from the topic of this thread, but briefly:

Secret Societies (or "societies with secrets") anchor around ideology. Ideas precede and determine reality*. At the top (Kether), is where the ideology is concepted at its vaguest (as archetype). At the bottom (Malkuth) is where it is implemented in the material. Biblical Genesis - or BRAShTh - is a description of this cycle).

The stages of initiation are easements into an order's highest conception, which are determined by those graded as "The Master Of The Temple". Each "aeon" is simply the archetype which is most predominant at a particular point of time.

* This actually isn't entirely true. The process is cyclical, but it's easier to understand it this way in practice.

to everyone that got here because this is leaking on plebbit and halfchan:

if you want to help,
download the entire blockchain for bitcoin and litecoin
download all previous insurance files (links are above) and host them
scrape the blockchain for pgp keys
run foresincs software on all decoded wikileaks blockchain data
download multiple versions of file.wikileaks.org/file and file.wikileaks.org/torrent and check what has been changed in the last few days
check what was changed in the saudi-database.zip and its torrent
look into @m_cetera twitter account which seems to have logged into wikileak's twitter
look into swikil's reddit account
build something that will push any important information to all cryptocurrency blockchains. this is the most important thing that no one has done so far and all progress disappears when they get v& after getting too close. if that is ready, everyone might be able to finally see what was unlocked here on oct 27 without getting shot in the back of the head 33 times while black bagged in blacksites.

semper fi

you can even help if youre just a shitposters that cant into computers

use the shilling and censorship against them. shitpost all over the place every single thing youve gathered. all the shit leads all the stupid theories. everything. but then take note at which things gets slid which things get deleted which sites are not allowed to have archives which files are hard to download which torrents suck which hashes are replaced and so on. that way the enemy can end up telling you what they are hiding. their disinfo doesnt work because there are people here that know how to code and test things. there are things you simply cant fake that have been discovered and written here. the autisim is too great here. disinfo doesnt do shit.

visit sites from different proxies of different parts of the world. see what can be seen and what can not. see what google doesnt pick up. if you were in tox or bitmessage chats with good intel. just dump it here in binary or someshit so that they cant google it. everyones v& anyway so it doesnt matter.

check when the blockchain gets attacked. its always after we find something. check when bitmessage gets flooded and turns slow. keep track of these things. the timing the dates. you can by trial and error find what is sensitive. if you are a tech person maybe make tutorials to help others like jean used to do. make honeypots for the shills and globalists trying to stop this. track their ips. doxx the shit out of them. find whois for sites that get redirected for no reason. find similar patterns. see if you can catch the fuckers that are taking over wl and other sites. keep track of shitty mods that are clearly shills. fucking have to fight back using their same techniques. theres not enough vans for all of us.

The usual stuff the bot spams cp/malware/spam.
It must just be a broken bot it just posted about 17 times here at the same exact moment posting the same thing then stopped, It also posted the same thing somewhere else 7 times at the same exact moment then stopped. It's probably nothing dough because it hasn't seemed to continue,

Must of been glitched but I would still check up on it, it's mainly spamming cp probably to falsely evidence to jail us.

We need to make a new bunker thread (on an onion link of course) that has:

CODE: all the code that has been written so far and how to use it

ARCHIVE: links to all threads were keys and sensitive information was posted and deleted as long as any copies they have of those threads

INDEX: all the information about the unindexed and missing emails as well as all the changes that have been made to file.wikileaks.org/file

BACKUPS: torrent backups for all insurance files, blockchains (lite and bitcoin), file.wikileaks.org/file and all progress

PUSHING: code to push progress into all the cryptocurrency blockchains

CHANGES: list of changes to the wikileaks site and twitter

TIMELINE: complete timeline of all that's happened including DDoSs and deletions

LEADS: a list of leads that are currently being worked on

WHITEHAT: all information on the people trying to take over the wikileaks site and twitter

OPSEC: tutorials for normies to not get v&

>NOTE: When we release pre-commitment hashes they are for decrypted files (obviously). Mr. Assange appreciates the concern.

Wikileaks just confirmed they are compromised.

Hashes have been for encrypted files since 2010.
They admitted the hashes are for those files.
They admitted they are watching.

we have to find those leaks that were stopped.

WE ARE PHASE3

A warning for potential whistleblowers:

h ttps://web.archive.org/web/20161118031351/h ttps://8ch.net/pol/res/8281601.html

STORY REMOVED FROM /R/FICTION ALMOST IMMEDIATELY

(This is purely a work of fiction. Any resemblance to real persons or events are purely coincidental.)

"If the password is ever released ("Whatever happens, even if there's video; it was murder"), the files are encrypted via OpenSSL file encryption. "

The Great Wizard of Leaks had been exposing the corruption of the Kings and Rulers for a long time. But one day after exposing their treasonous actions in foreign lands, they decided that he had gone too far. As a result, The Great Wizard was forced to take refuge in a castle that the Kings and Rulers did not control. The Great Wizard resided here for five years and continued to cast spells that upset the people's tyrannic rulers.

However, on October 15th in the Current Year, the Rulers had had enough and decided to unplug the source of the Great Wizard's power (the Internet), thereby preventing him from interfering with their rigged election which favored the Great Witch of the West (aka: The Cunt). Despite this, The Cunt still lost to the Almighty Knight Sir Trumpador Maximus Decimus Meridius III, who claimed he had plans to bring peace to the Lands and "drain the swamp" that gave The Cunt and her cronies their power. Although sensible people were not all trusting of Trumpador, most of them realized that he still represented their best hope.

Things started looking better in the West, but there were still some problems.

Well known and generally despised Gargoyle $oros was trying to sow seeds of division amongst the people in order to regain control. He had managed to split the people of the land broadly into two opposing groups, The Left and The Right, exploiting their fears by exaggerating everything unkosher that Knight Sir Trumpador Maximus Decimus Meridius III had said. The Gargoyle even went so far as to fund civil rebellions, using the same techniques of subversion that were used in other lands to the East to overthrow Governments that the Gargoyle did not like. "Divide and conquer!" he had told The Cunt and her cronies. "It is far easier to conquer a land if the citizens are divided and cannot put up a unified resistance!"

Meanwhile, The Great Wizard may have had his own woes. Since his source of mana (Internet) was cut, the people had not heard from him and his group of apprentice wizards (belonging to a noble order known as WizardLeaks). They had become seemingly incommunicado. Rumor has it that their order was infiltrated by treasonous goons working on behalf of The Cunt and the Gargoyle and it was entirely possible that the Great Wizard himself had been captured.

The King and his Alphabet Stooges may have been clever here though. Instead of letting the people know that the Great Wizard had been illegally abducted, they may have chopped previously unreleased interview footage to make it appear as though the Great Wizard was still alive and well. This is not confirmed, but the people have good reason to speculate.

The Great Wizard always knew that his capture was a possibility and thus dispersed gold to the people which could only be unlocked with a key that would automatically release if his Wizardly Magic was to cease.

On October 22nd in the Current Year, this may have occurred. The well-established MagiRealm known as Readit and the sensitive town of Twithurt were attacked and brought down while the keys were allegedly getting dispersed. Most mentions of the alleged keys on Readit and Twithurt were also removed.

Some citizens that frequented the horrible lair known as Forchan, believed to be the dwelling place of the notorious hacker known as Forchan, also reported that The King's Alphabet Stooges were even removing the alleged keys from there.

They started wondering where else The Great Wizard may have hidden the keys to this gold. A place where the Alphabet Stooges would have a hard time removing it.

After much thought, some citizens agreed that the most likely place was in a thing called the "Blockchain" that resided in the MagiRealm. This would be hard to for the Evil Alphabet Wizard's to censor as it is mostly controlled and determined by the people themselves.

The question is: Are you a bad enough dude to help rescue The Great Wizard?

A completely fictional timeline of events follows below.

NORMIES PAY ATTENTION IF YOU WANT TO HELP

People are begging to find the suppressed emails and you can help:
h ttps://ww w.reddit.com/r/DNCleaks/comments/5cljkp/work_in_progress_wikileaks_the_missinglosthidden/

This is true for Podesta, Clinton, and DNC emails.

Remember that Wikileaks never had duplicates in the past and they are now being used to get the number of leaked emails falsely up. This can easily be tested (do a diff before the latest leaks).

Also, users are not reading certain emails because they think it is SPAM. This is incorrect. They embedded their communications into emails that look like SPAM so that users never read them. Don't fall for this.

This strategy was used on this thread: h ttps://8ch.net/pol/res/8281601.html There is SPAM larper used to hide real information. The larper says 15 staff (it's 14) and immediately makes other users not read further. Pay attention to the thread and you will see that a user with a Tor ID is posting provable facts that lead to unlocking the files and finding the suppressed leaks.

I will post more information again soon. One important thing is to push a list of provable testable facts and code into the blockchain (Bitcoin, Litecoin, and more). We won't be able to spread it without this. Code to allow normies to do this is being suppressed. Updates on this later.

>we want PGP signer message as proof of life

tl;dr Many people are asking for PGP signed message as proof of Assanges life.
We DON'T have knowledge of any PGP key that is owned strictly by Assange.

We have two keys that might be owned by WikiLeaks: Editorial Office Key and High Security Signing Key(this one might be fake, there is no proof of WL or Assange ever owning it).

0x92318DBA 2015-04-10 WikiLeaks Editorial Office High Security Communication Key (You can contact WikiLeaks at h ttps://wlchatc3pjwpli5r.onion and h ttps://wikileaks.org/talk) <contact-us-using-our-chat-system@wikileaks.org>
This one is controlled by Editorial Office. PGP message signed by it doesnt mean Assange signed it. It might even been compromised if servers and assets were taken over.
This key matches h ttps://wikileaks.org/#submit_wlkey (that is only public proof that this key is owned by WikiLeaks. Or current admin of wikileaks.org)

0x73C81E1B 2015-04-10 WikiLeaks High Security Signing Key (The key is available to view at h ttps://wikileaks.org/wl-high-security-signing-key. You can contact WikiLeaks at h ttps://wlchatc3pjwpli5r.onion and h ttps://wikileaks.org/talk.) <contact-us-using-our-chatsystem@wikileaks.org>
For this one we have no proof it was ever used by Assange or WL. I havent found any mention of it on internet. Its also not signed WL Editorial Office key, so they havent show they trust it.

On link h ttps://pgp.mit.edu/pks/lookup?op=vindex&search=0x93ED732E92318DBA you can see I managed to sign 0x92318DBA WikiLeaks Editorial Office with my fake key I created. (239D778D 2015-04-10 Fake Wikileaks key for testing fake creation time (Created in Oct 19 2016) <Fake@fake.com>)
My key is even higher than "WikiLeaks High Security Signing Key".

If I would use same credentials as WikiLeaks High Security Signing Key, there would be no way to tell which key is more "High Security". Only differnce would be in fingerprint. But because h ttps://wikileaks.org/wl-high-security-signing-key is 404, there is no way to tell which fingerprint is legit.

I havent found any sources with key that would be used exclusively by Assange. (just one from some mailing list from 1996, probably not used anymore)

We should just find the last key that was used to sign an official Wikileaks statement. A lot of people claim it happened on Oct 15 or Oct 10 but I'm not sure what
they are referring to.

Anonymous 11/19/2016 (Sat) 13:53:11 Id: 5aa041 [Preview] No. 22396 [Hide User Posts] [X] del >>22415

post them here

>>22393
Haven't been able to find anything about the PGP public key or any message signed by WL/Assange either. Only been able to find bullshit keys. I'm thinking it's
being purged off most search engines.

They just emptied their wallet. 68471.13 US Dollars in one day gone.

We should check if the same is happening with Litecoin.

If we track down where the money goes, we can find who took over WL.

Suggestion regarding distribution:
Previous replies have noted that those attempting distribution have been V&. Moving forward, a 2 prong attempt should be made:
1) If you should come across any keys which successfully open wikileaks insurance files, queue up the printer. The first thing you should do is print off thousands of copies of the keys and how you can use those keys to open the WL insurance files. Print them up, and scatter them in an extremely public location (i.e. Times Square or the most population dense location in your vicinity).

You don't have to be the one to physically distribute the information, but ensure that whoever you have distributing, make sure that the connection and contact is made in person/offline. If you have access to the keys, trying to distribute on the system controlled by them is playing into their hands.

Beyond printouts, locate ham operators in your area. Ask them to send one unauthorized message containing the DMS keys. This will be broadcast worldwide, and will be impossible to contain.

2) Once distribution is made to thousands in your area via printouts, attempt distribution online. If those with something to hide have the capabilities available described above this post; it is in our/your best interest that the information is distributed in the classical manner via hard copy. Once that step is accomplished, do battle in their domain. Use your skills to distribute in the most efficient digitally manner.

Note: The first American Revolution was started in bar rooms, with an insurrectionist pamphlet titled "Common Sense" that swayed the public opinion. If they control the digital sphere, let's push it out in the old-school dumb method.

TL:DR: Go old school.

You've found the keys almost a month ago and still haven't managed to use one of the nearly endless possibilities to post them?

That seems extremely unlikely. Much more so if writing a tutorial takes you a month.
>>22456 is pretty much as short as it needs to be, though some comments would of course be nice.

So, could someone who's not trying to be edgy cool with inflationary use of "v&" pray tell what progress is actually made?

>>22480
Call me a normie or a plebbit fag but I can't be bothered minding my OPSEC long enough to sit in a chat, let alone abuse the blockchain. I'm already annoying people by reading this stuff at all.

I would guess, since we do not know what situation Assange is currently in, that you want to get things out asap, not prepare some silly anonymous tier OP for ages, which assuming you do have the keys, is the only thing I can imagine you'd need help with at this point in time.

I'm here if you need help pushing public outlets, otherwise you're welcome to tell me why I'm wrong, but I do not currently have the time for your BM.

inb4 nice try CIA.
You wanna go public, you gotta accept the fact people who you dont want to see stuff, will see it and engage countermeasures one way or another. Get over yourselves.
